

Duration of the Courses:

The undergraduate dental training programme leading to BDS degree shall be of 4 (four) Academic years with 240 teaching days in each academic year, plus one year paid rotating internship in a dental college. Every candidate will be required, after passing the final BDS examination, to undergo one year paid rotating internship in a dental college. The detailed curriculum of Dental Internship Dental Programme is annexed as Annexure-A. The Internship shall be compulsory and BDS Degree shall be granted after completion of one year paid internship.

During this period, the student shall be required to have engaged in full time study at a dental college recognized or approved by the Dental Council of India.

Migration:

Migration from one dental college to other is not a right of a student. However, migration of students from one dental college to another dental college in India may be considered by the Dental council of India. Only in exceptional cases on extreme compassionate ground*, provided following criteria are fulfilled. Routine migrations on other ground shall not be allowed.

Both the colleges, i.e. one at which the student is studying at present and one to which migration is sought, are recognised by the Dental Council of India.

The applicant candidate should have passed first professional BDS examination.

The applicant candidate submits his application for migration, complete in all respects, to all authorities concerned within a period of one month of passing (declaration of results) the first professional Bachelor of Dental Surgery (BDS) examination.

The applicant candidate must submit an affidavit stating that he/she will pursue 240 days of prescribed study before appearing at IInd professional Bachelor of Dental Surgery (BDS) examination at the transferee dental college, which should be duly certified by the Registrar of the concerned University in which he/she is seeking transfer. The transfer will be applicable only after receipt of the affidavit.

Note 1:

- (i) Migration is permitted only in the beginning of IInd year BDS Course in recognized Institution.

All applications for migration shall be referred to Dental Council of India by college authorities. No Institution / University shall allow migrations directly without the prior approval of the Council.

Council reserved the right, not to entertain any application which is not under the prescribed compassionate grounds and also to take independent decisions where applicant has been allowed to migrate without referring the same to the Council.

Note 2: *compassionate ground criteria:

Death of supporting guardian.

Disturbed conditions as declared by Government in the Dental College area.

III. Attendance requirement, Progress and Conduct

75% in theory and 75% in practical / clinical in each year.

In case of a subject in which there is no examination at the end of the academic year / semester, the percentage of attendance shall not be less than 70%.

However, at the time of appearing for the professional examination in the subject, the aggregate percentage of attendance in the subject should satisfy condition (i) above.

IV. Subjects of Study:

First Year

General Human Anatomy including Embryology and Histology

General Human Physiology and Biochemistry, Nutrition and Dietics

Dental Anatomy, Embryology and Oral Histology

Dental Materials

Pre-clinical Prosthodontics and Crown & Bridge

Second Year

General Pathology & Microbiology

General and Dental Pharmacology and Therapeutics

Dental Materials

Pre clinical Conservative Dentistry

Pre clinical Prosthodontics and Crown & Bridge

Oral Pathology & Oral Microbiology

Third Year

General Medicine

General Surgery

Oral Pathology and Oral Microbiology

Conservative Dentistry and Endodontics

Oral & Maxillofacial Surgery

Oral Medicine and Radiology

Orthodontics & Dentofacial Orthopaedics

viii) Paediatric & Preventive Dentistry

Periodontology

Prosthodontics and Crown & Bridge

Fourth Year

Public Health Dentistry

Periodontology

Orthodontics & Dentofacial orthopaedics

Oral Medicine & Radiology

Oral & Maxillofacial Surgery

Conservative Dentistry and Endodontics

Prosthodontics and Crown & Bridge

Paediatric & Preventive Dentistry

OR

Part I

Public Health Dentistry

Periodontology

Orthodontics & Dentofacial orthopaedics

Oral Medicine & Radiology

Part II

Oral & Maxillofacial Surgery

Conservative Dentistry and Endodontics

Prosthodontics and Crown & Bridge

Paediatric & Preventive Dentistry

MINIMUM WORKING HOURS FOR EACH SUBJECT OF STUDY
(BDS COURSE)

Subject	Lecture Hours	Practical Hours	Clinical Hours	Total Hours
General Human Anatomy Including Embryology, Osteology and Histology	100	175		275

HUMAN ANATOMY, EMBRYOLOGY, HISTOLOGY & MEDICAL GENETICS

GOAL

The students should gain the knowledge and insight into, the functional anatomy of the normal human head and neck, functional histology and an appreciation of the genetic basis of inheritance and disease, and the embryological development of clinically important structures. So that relevant anatomical and scientific foundations are laid down for the clinical years of the BDS course.

B) OBJECTIVES :

a) KNOWLEDGE AND UNDERSTANDING :

At the end of the 1st year BDS Course in Anatomical Sciences the undergraduate student is Expected to :

Know the normal disposition of the structures in the body while clinically examining a patient and while conducting clinical procedures.

Know the anatomical basis of disease and injury.

Know the microscopic structure of the various tissues, a pre requisite for understanding of the disease processes.

Know the nervous system to locate the site of lesions according to the sensory and or motor deficits encountered.

Have an idea about the basis of abnormal development critical stages of development, effect of teratogens, genetic mutations and environmental hazards.

Know the sectional anatomy of head neck and brain to read the features in radiographs and pictures taken by modern imaging techniques.

Know the anatomy of cardio-pulmonary resuscitation.

b) SKILLS

To locate various structures of the body and to mark the topography of the living anatomy.

To identify various tissues under microscope.

To identify the features in radiographs and modern imaging techniques.

To detect various congenital abnormalities.

C) INTEGRATION :

By emphasizing on the relevant information and avoiding unwanted details, the anatomy taught integrally with other basic sciences and clinical subjects not only keeps the curiosity alive in the learner but also lays down the scientific foundation for making a better doctor, a benefit to the society.

This insight is gained in a variety of ways :

Lecturers and small group teaching

Demonstrations

Dissection of the human cadaver

Study of dissected specimens

Osteology

Surface anatomy on living individual

Study of radiographs and other modern imaging techniques

Study of Histology slides

Study of embryology models.

Audio visual aids.

Throughout the course, particular emphasis is placed on the functional correlation, clinical application and on integration with teaching in other bio dental disciplines.

D) AN OUTLINE OF THE COURSE CONTENT :

General anatomy : Introduction of anatomical terms and brief outline of various systems of the body.

Regional anatomy of head and neck with osteology of bones of head and neck with emphasis on topics of dental importance.

General disposition of thoracic, abdominal and pelvic organs.

The regional Anatomy of the sites of intramuscular and intra vascular injections and lumbar puncture

General embryology and systemic embryology with respect to development of head and neck.

6. Histology of basic tissues and of the organs of gastrointestinal, respiratory endocrine, excretory systems and gonads

7. Medical genetics.

E) FURTHER DETAILS OF THE COURSE:

I. INTRODUCTION TO :

Anatomical terms

Skin, superficial fascia and deep fascia

Cardiovascular system, portal system collateral circulation and arteries.

Lymphatic system, regional lymph nodes

Osteology - including ossification and growth of bones

Myology - Including types of muscle tissue and innervation

Syndesmology - including classification of Joints

Nervous system

II. HEAD & NECK :

01. Scalp, face and temple, lacrimal apparatus 02. Neck - Deep fascia of neck, posterior triangle suboccipital triangle, anterior triangle, anterior median region of the neck deep structure in the neck. 03. Cranial cavity - Meninges, parts of brain, ventricles of brain, dural venous sinuses, cranial nerves attached to the brain, pituitary gland. 04. Cranial nerves - III, IV, V, VI, VII, IX,, XII in detail. 05. Orbital Cavity - Muscles of the eye ball, supports of the eye, ball, nerves and vessels in the orbit. 06. Parotid gland. 07. Temporo mandibular joint, muscles of mastication, infratemporal fossa, pterygo - palatine fossa. 08. Submandibular region. 09. Walls of the nasal cavity, paranasal air sinuses. 10. Palate. 11. Oral cavity, Tongue 12. Pharynx (palatine tonsil and the auditory tube) Larynx. OSTEOLOGY - foetal skull, adult skull, individual bones of the skull , hyoid bone and cervical vertebrae.

III. THORAX : Demonstration on a dissected specimen of

Thoracic wall

Heart Chambers

Coronary arteries

Pericardium

5, Lungs - surfaces ; pleural cavity

6. Diaphragm

IV. ABDOMEN : Demonstration on a dissected specimen of

Peritoneal cavity

Organs in the abdominal and pelvic cavity

V. CLINICAL PROCEDURE :

a) Intramuscular injections : Demonstration on a dissected specimen and on a living person of the following sites of injection.

Deltoid muscles and its relation to the axillary nerve and radial nerve.

Gluteal region and the relation of the sciatic nerve.

Vastus lateralis muscle.

Intravenous injections and venesection : Demonstration of veins in the dissected specimen and on a living person.

1. Median cubital vein 2. Cephalic Vein 3. Basilic vein 4. Long saphenous vein

Arterial pulsations : Demonstration of arteries on a dissected specimen and feeling of pulsation of the following arteries on a living person.

1. Superficial temporal 2. Facial 3. carotid 4. Axillary 5. Brachial 6. Radial 7. Ulnar Femoral
9. Popliteal 10. Dorsalispedis

d) Lumbar puncture: Demonstration on a dissected specimen of the spinal cord cauda equine and epidural space and the inter vertebral space between L4 & L5

VI. EMBRYOLOGY

Oogenesis, Spermatogenesis, Fertilisation, Placenta, Primitive streak, Neural crest, Bilaminar and trilaminar embryonic disc, Intra embryonic mesoderm - formation and fate, notochord formation and fate, Pharyngeal arches, pouches and clefts, Development of face, tongue, palate, thyroid gland, pituitary gland, salivary glands and anomalies in their development, Tooth development in brief.

VII. HISTOLOGY :

The Cell :

Basic Tissues - Epithelium, connective tissue including cartilage and bone, Muscle Tissues, nervous tissue : Peripheral Nerve, optic nerve, sensory ganglion, motor ganglion, skin.

Classification of Glands

Salivary glands (serous, mucous and mixed gland), Blood vessels, Lymphoid tissue Tooth, lip, tongue, hard palate, oesophagus, stomach, duodenum, ileum, colon, vermiform appendix Liver, Pancreas, Lung, Trachea, Epiglottis, Thyroid gland, para thyroid gland, supra renal gland and pituitary gland, kidney, ureter, Urinary bladder, Ovary and testis.

VIII. MEDICAL GENETICS :

Mitosis, meiosis, Chromosomes, gene structure, Mendelism, modes of inheritance

RECOMMENDED BOOKS :

SNELL (Richard S.) Clinical Anatomy for Medical students Ed. 5, Little Brown & Company Boston.

RJ. LAST's Anatomy : McMinn, 9th edition.

ROMANES (G.J.) Cunningham Manual of Practical Anatomy : Head & Neck & Brain Ed. Vol. III, Oxford Medical Publication.

WHEATER, BURKITT & DANIELS, Functional Histology, Ed. 2, Churchill Livingstone.

SADLER, LANGMANS, Medical Embryology, Ed. 6.

JAMES E ANDERSON, Grant's Atlas of Anatomy. Williams & Wilkins.

WILLIAMS, Gray's Anatomy, Ed. 38., Churchill Livingstone.

EMERY, Medical Genetics.

Text book of Human Histology with Colour Atlas - Inderbir Singh, 5th Edition

10. B.D. Chaurasiya's Hand Book of General Anatomy - B. D. Chaurasiya - 3rd Edition

11. Human Embryology - Inderbir Singh, C P Pal - 8th Edition

B D Chaurasiya's Human Anatomy Regional & Applied - B.D. Chaurasiya - 5th Edition Vol. I, II, III

Anand's Human Anatomy Complete book for Dental Students (A text book of human Anatomy) - Mahindra Kr. Anand - 1st Edition

Text book of Anatomy with Colour Atlas - Inderbir Singh 4th Edition, Vol. I, II, III

2. HUMAN PHYSIOLOGY

A) GOAL

The broad goal of the teaching undergraduate students in Human Physiology aims at providing the student comprehensive knowledge of the normal functions of the organ systems of the body to facilitate an understanding of the physiological basis of health and disease.

OBJECTIVE :

a) KNOWLEDGE :

At the end of the course, the student will be able to :

1. Explain the normal functioning of all the organ systems and their interactions for well coordinated total body function.

Assess the relative contribution of each organ systems towards the maintenance of the milieu interior.

List the physiological principles underlying the pathogenesis and treatment of disease.

b) SKILLS :

At the end of the course, the student shall be able to :

Conduct experiments designed for the study of physiological phenomena.

Interpret experimental and investigative data.

Distinguish between normal and abnormal data derived as a result of tests which he / she has performed and observed in the laboratory.

c) INTEGRATION :

At the end of the integrated teaching the student shall acquire an integrated knowledge of organ structure and function and its regulatory mechanisms.

B) COURSE CONTENT THEORY

1. GENERAL PHYSIOLOGY

Homeostasis: Basic concept, Feed back mechanisms.

Structure of cell membrane, transport across cell membrane.

Membrane potential.

2. BLOOD

Composition & functions of blood

Specific gravity, packed cell volume, factors affecting & methods of determination.

Plasma proteins : Types concentration, functions & variations.

Erythrocyte - Morphology, functions & variations. Erythropoietin & factors affecting erythropoiesis.

ESR - Methods of estimation, factors affecting, variations & significance.

Haemoglobin - Normal concentration, method of determination & variation in concentration. Blood Indices - MCV, MCH, MCHC - definition, normal values, variation.

Anaemia - Definition. classification, life span of RBC.s destruction of RBC.s, formation & fate of bile pigments, Jaundice - types.

Leucocytes : classification, number percentage, distribution morphology, properties, functions & variation. role of lymphocytes in immunity, leucopoiesis life span & fate of leucocytes.

Thrombocytes - Morphology, number, variations, function & thrombopoiesis.

Haemostasis - Role of vasoconstriction, platelet plug formation in haemostasis, coagulation factors, intrinsic & extrinsic pathways of coagulation, clot retraction.

Tests of haemostatic function, platelet count, clotting time, bleeding time, prothrombin time - normal values, method & variations. Anticoagulants - mechanism of action. Bleeding disorders.

Blood groups : ABO & Rh system method of determination, importance, indications & dangers of blood transfusion, blood substitutes.

Blood volume : Normal values variations.

Body fluids : distribution of total body water, intracellular & extra cellular compartments, major anions & cations in intra and extra cellular fluid.

Tissue fluids & lymph : Formation of tissue fluid, composition, circulation and functions of lymph. Oedema - causes.

Functions of reticulo endothelial system.

3. MUSCLE AND NERVE

classification of nerves, structure of skeletal muscle - Molecular mechanism of muscle contraction, neuromuscular transmission. Properties of skeletal muscle. Structure and properties of cardiac muscle & smooth muscle.

4. DIGESTIVE SYSTEM :

Introduction to digestion : General structure of G.I. tract, Innervation

Salivary glands : Structure of salivary glands, composition, regulation of secretion and functions of saliva.

Stomach : composition and functions of gastric juice, mechanism and regulation of gastric secretion.

Exocrine Pancreas - Structure, composition of pancreatic juice, functions of each component, regulation of pancreatic secretion.

Liver : structure, composition of bile, functions of bile, regulation of secretion Gall bladder : structure, functions

Small intestine - Composition, functions & Regulation of secretion of intestinal juice. Large Intestine - Functions

Motor functions of GIT : Mastication, deglutition, gastric filling & emptying, movements of small and large intestine, defecation.

5. EXCRETORY SYSTEM :

Structure & functions of kidney, functional unit of kidney & functions of different parts. Juxta glomerular apparatus, renal blood flow.

Formation of Urine : Glomerular filtration rate - definition, determination, normal values, factors influencing G.F.R. Tubular reabsorption - Reabsorption of sodium, glucose, water & other substances. Tubular secretion Secretion of urea, hydrogen & other substances.

Mechanism of concentration & dilution of urine.

Role of kidney in the regulation of pH of the blood.

Micturition : anatomy & innervation of Urinary bladder, mechanism of micturition & abnormalities

BODY TEMPERATURE & FUNCTIONS of SKIN

ENDOCRINOLOGY

General endocrinology - Enumeration of endocrine glands & hormones - General functions of endocrine system, chemistry, mechanism of secretion, transport, metabolism, regulation of secretion of harmonous.

Hormones of anterior pituitary & their actions, hypothamic regulation of anterior pituitary function. Disorders of secretion of anterior pituitary hormones.

Posterior pituitary : Functions, regulation & disorders of secretion.

Thyroid : Histology, synthesis, secretion & transport of hormones, actions of hormones regulation of secretion & disorders, Thyroid function tests.

Adrenal cortex & Medulla - synthesis, secretion, action, metabolism, regulation of secretion of hormones & disorders.

Other hormones - Angiotensin A.N.F.

8. REPRODUCTION

Sex differentiation, Physiological anatomy of male and female sex organs,

Female reproductive system: Menstrual cycle, functions of ovary, actions of oestrogen & Progesterone, control of secretion of ovarian hormones tests for ovulation, fertilization, implantation, material changes during pregnancy, pregnancy tests & parturition.

Lactation, composition of milk factors controlling lactation, milk ejection, reflex,

Male reproductive system : spermatogenesis, semen and contraception.

9. CARDIO VASCULAR SYSTEM

Functional anatomy and innervation of heart properties of cardiac muscle. Origin & propagation of cardiac impulse and heart block.

Electrocardiogram - Normal electrocardiogram. Two changes in ECG in myocardial infarction.

Cardiac cycle - Phases, Pressure changes in atria,, ventricles & aorta. Volume changes in ventricles. Jugular venous pulse, arterial pulse. Heart sounds : Mention of murmurs

Heart rate : Normal value, variation & regulation

Cardiac output : Definition, normal values, one method of determination, variation factors affecting heart rate and stroke volume.

Arterial blood pressure : Definition, normal values & variations, determinants, regulation & measurement of blood pressure.

coronary circulation.

Cardio vascular homeostasis - Exercise & Posture.

10. RESPIRATORY SYSTEM

Physiology of Respiration: External & internal respiration

Functional anatomy of respiratory passage & lungs.

Respiratory movements : Muscles of respiration, mechanism of inflation & deflation of lungs

Intra pleural & intra pulmonary pressures & their changes during the phases of respiration. Mechanics of breathing - surfactant, compliance & work of breathing.

Spirometry : Lung volumes & capacities definition, normal values, significance, factors affecting vital capacity, variations in vital capacity, FEV & its variations.

Pulmonary ventilation - alveolar ventilation & dead space - ventilation

Composition of inspired air, alveolar air and expired air.

Exchange of gases : Diffusing capacity, factors affecting it

Transport of Oxygen & carbon dioxide in the blood

Regulation of respiration - Neural & chemical

Hypoxia cyanosis, dyspnoea, periodic breathing

Artificial respiration, pulmonary function tests.

11. CENTRAL NERVOUS SYSTEM

Organization of central nervous system

Neuronal organization at spinal cord level

Synapse receptors, reflexes, sensations and tracts

Physiology of pain

Functions of cerebellum thalamus, hypothalamus and cerebral cortex

Formation and functions of CSF

Autonomic nervous system

12. SPECIAL SENSES

Fundamental knowledge of vision, hearing taste and smell

PRACTICALS

The following list of practical is minimum and essential. all the practical have been categorized as procedures and demonstrations. The procedures are to be performed by the students during practical classes to acquire skills. All the procedures are to be included in the University practical examination. Those categorized as demonstrations are to be shown to the students during practical classes. However these demonstrations would not be included in the University examinations but question based on this would be given in the form of charts, graphs and calculations for interpretation by the students.

PROCEDURE

- Enumeration of Red Blood Cells
- Enumeration of White Blood Cells
- Differential leucocyte counts
- Determination of Haemoglobin
- Determination of blood group
- Determination of bleeding time and clotting time
- Examination of pulse
- Recording of blood pressure.

DEMONSTRATION

- Determination of packed cell volume and erythrocyte sedimentation rate
- Determination of specific gravity of blood
- Determination of erythrocyte fragility
- Determination of vital capacity and timed vital capacity
- Skeletal muscle experiments

study of laboratory appliance in experimental physiology. Frogs gastrocnemius sciatic preparation. Simple muscle curve, effects of two successive stimuli, effects of increasing strength of stimuli, effects of temperature, genesis of fatigue and tetanus. Effect of after load and free load on muscle contraction, calculation of work done.

Electrocardiography : Demonstration of recording of normal Electro cardiogram

Clinical examination of cardiovascular and respiratory system.

TEXT BOOKS

- Guyton ; Text book of Physiology, 9th edition
- Ganong ; Review of medical Physiology, 19th edition
- Vander, Human Physiology, 5th edition
- Choudhari ; Concise Medical Physiology, 2nd edition
- Chatterjee : Human Physiology, 10th edition

BIOCHEMISTRY

AIMS AND SCOPE OF THE COURSE IN BIOCHEMISTRY

The major aim is to provide a sound but crisp knowledge on the biochemical basis of the life processes relevant to the human system and to dental / medical practice. The contents should be organized to build on the already existing information available to the students in the pre university stage and reorienting. A mere rehash should be avoided.

The chemistry portion should strive towards providing information on the functional groups, hydrophobic and hydrophilic moieties and weak valence forces that organize macromolecules. Details on structure need not be emphasized.

Discussion on metabolic processes should put emphasis on the overall change, interdependence and molecular turnover. While details of the steps may be given, the student should not be expected to memorize them,. An introduction to biochemical genetics and molecular biology is a must but details should be avoided. The exposure to antivitamins, antimetabolites and enzyme inhibitors at this stage, will provide a basis for the future study of medical subjects. An overview of metabolic regulation is to be taught by covering hormonal action, second messengers and regulation of enzyme activities. Medical aspects of biochemistry should avoid describing innumerable functional tests, most of which are not in vogue. Cataloguing genetic disorders under each head of metabolism is unnecessary. A few examples which correlate genotype change to functional changes should be adequate.

At the end of the course of the students would be able to acquire a useful core of information which can be retained for a long time. Typical acid tests can be used to determine what is to be taught or what is to be learnt. A few examples are given below.

Need not know the structure of cholesterol. Should know why it cannot be carried free in plasma

Mutarotation should not be taught. Student should know why amylase will not hydrolyse cellulose.

Need not know the details of alpha - helix and beta - pleats in proteins should know why haemoglobin is globular and keratin is fibrous.

Need not know mechanism of oxidative phosphorylation.

Should know more than 90% of ATP is formed by this process

5. Need not know details of the conversion of pepsinogen to pepsin

Should know hydrochloric acid cannot break a peptide bond at room temperature. 6. Need not remember the steps of glycogenesis.

should know that excess intake of carbohydrate will not increase glycogen level in liver or muscle.

7. Need not know about urea or creatinine clearance tests.

Should know the basis of increase of urea and creatinine in blood in renal insufficiency.

8. Need not know the structure of insulin

should know why insulin level in circulation is normal in most cases of maturity onset diabetes.

9. Need not know the structural details of ATP.

Should know why about 10 g of ATP in the body at any given time meets all the energy

needs. 10. Need not know the mechanism of action of polyhydroxylase

should know why the gum bleeds in scurvy.

11. Need not know the structure of vitamin K.

Should know the basis of internal bleeding arising due to its deficiency.

12. Need not remember the structure of HMGCoA.

should know why it does not lead to increased cholesterol synthesis in starvation.

BIOCHEMISTRY & NUTRITION

1. CHEMISTRY OF BIOORGANIC MOLECULES

Carbohydrates : Definition, Biological importance and classification. Monosaccharides - Isomerism, anomers. Sugar derivatives, Disaccharides. Polysaccharides. Structure of starch and glycogen.

Lipids : Definition, biological importance and classification. Fats and fatty acids. Introduction to compound lipids. Hydrophobic and hydrophilic groups. Cholesterol. Bile salts. Micelle. Bimolecular leaflet.

Proteins : Biological importance. Amino acids : Classification. Introduction to peptides. Proteins : simple and conjugated ; globular and fibrous. Charge properties. Buffer action. Introduction to protein conformation : Denaturation.

Nucleic acids : Building units, Nucleotides. Outline structure of DNA and RNA.

High energy compounds : ATP, Phosphorylamidines, Thioesters, Enol phosphates.

2. MACRONUTRIENTS AND DIGESTION

Energy needs : Basal metabolic rate. dietary carbohydrates, fibres. Dietary lipids, essential fatty acids. Nitrogen balance. Essential amino acids. Protein quality and requirement (methods for evaluation of protein quality to be excluded). Protein calorie malnutrition. Balanced diet.

Enzymatic hydrolysis of dietary carbohydrates. Mechanism of uptake of monosaccharides.

Digestion and absorption of triacylglycerols. Enzymatic hydrolysis of dietary proteins and uptake of amino acids.

3. MICRONUTRIENTS :

Vitamins : Definition, classification, daily requirement, sources and deficiency symptoms. Brief account of water- soluble vitamins with biochemical functions. Vitamin A functions including visual process. Vitamin D and its role in calcium metabolism. Vitamin E. Vitamin K and gamma carboxylation. Introduction to antivitamins and hypervitaminosis.

Minerals : Classification, daily requirement. Calcium and phosphate: sources, uptake, excretion, function, serum calcium regulation. Iron : Sources uptake and transport.

Heme and nonheme iron functions. deficiency. Iodine; Brief introduction to thyroxine synthesis. General functions of thyroxine. Fluoride : function, deficiency and excess indications of role of other minerals.

4. ENERGY METABOLISM

Overview : Outline of glycolysis pyruvate oxidation and citric acid cycle. Beta oxidation of fatty acids. Electron transport chain and oxidative phosphorylation. Ketone body formation and utilization. Introduction to glycogenesis, glycogenolysis, fatty acid synthesis, lipogenesis and lipolysis. Gluconeogenesis. Lactate metabolism. Protein utilization for energy. Glucogenic and ketogenic amino acids. Integration of metabolism.

5. SPECIAL ASPECTS OF METABOLISM

Importance of pentose phosphate pathway. Formation of glucuronic acid. Outlines of cholesterol synthesis and breakdown. Ammonia metabolism. Urea formation phosphocretine formation. Transmethylation. amines. Introduction to other functions of amino acids including one carbon transfer. Detoxication : Typical reactions. Examples of toxic compounds. Oxygen toxicity.

6. BIOCHEMICAL GENETICS AND PROTEIN SYNTHESIS

Introduction to nucleotides formation and degradation. DNA as genetic material. Introduction to replication and transcription. Forms and function of RNA. Genetic code and mutation. Outline of translation process. Antimetabolites and antibiotics interfering in replication. transcription and translation. Introduction to cancer, viruses and oncogenes.

7. ENZYME AND METABOLIC RELATION

Enzymes : definition, classification, specificity and active site. Cofactors. Effect of pH temperature and substrate concentration. Introduction to enzyme inhibitors, proenzymes and isoenzymes. Introduction to allosteric regulation, covalent modification and regulation by induction / repression.

Overview of hormones, Introduction to second messengers, cyclic AMP, calcium ion, inositol triphosphate. Mechanism of action steroid hormones, epinephrine, glucagons and insulin in brief. Acid base regulation. Electrolyte balance.

8. STRUCTURAL COMPONENTS AND BLOOD PROTEINS

Connective tissue : Collagen and elastin. Glycosaminoglycans. Bone structure. Structure of membranes. Membrane associated processes in brief. Exocytosis and endocytosis.

Introduction to cytoskeleton. Myofibril and muscle contraction in brief.

Hemoglobin : Functions. Introduction to heme synthesis and degradation. Plasma protein classification and separation. Functions of albumin. A brief account of immunoglobulins.

Plasma lipoproteins : Formation; function and turnover.

9. MEDICAL BIOCHEMISTRY

Regulation of blood glucose. Diabetes mellitus and related disorders. Evaluation of glycemic status. Hyperthyroidism and hypothyroidism : Biochemical evaluation. Hyperlipoproteinemias and atherosclerosis, Approaches to treatment. Jaundice : classification and evaluation. Liver function tests : Plasma protein pattern, serum enzymes level. Brief introduction to kidney function tests and gastric function tests. Acid base imbalance. Electrolyte imbalance evaluation. Gout Examples of genetic disorders including lysosomal storage disorders glycogen storage disorders, glucose 6 - phosphate dehydrogenase deficiency, hemoglobinopathies, inborn errors of amino acid metabolism and muscular dystrophy (one or two examples with biochemical basis will be adequate). serum enzymes in diagnosis.

PRACTICAL : Contact hours 50

1. Quantitative analysis of carbohydrates	4
2. Color reactions of proteins and amino acids	4
3. Identification of nonprotein nitrogen substance	4
4. Normal constituents of urine	4
5. Abnormal constituents of urine	4
6. Analysis of saliva including amylase	2
7. Analysis of milk Quantitative estimations	2
8. Titrable acidity and ammonia in urine	2
9. Free and total acidity in gastric juice	2
10. Blood glucose estimation	2
11. Serum total protein estimation	2
12. Urine creatinine estimation Demonstration	2
13. Paper electrophoresis charts / clinical data evaluation	2
14. Glucose tolerance test profile	2

15. Serum lipid profiles	1
16. Profiles of hypothyroidism and hyperthyroidism	1
17. Profiles of hyper and hypoparathyroidism	1
18. Profiles of liver function	1
19. Urea, uric acid creatinine profile in kidney disorders	1
20. Blood gas profile in acidosis / alkalosis	1

RECOMMENDED BOOKS

“Essential of Biochemistry” as a Text Book for 1st year BDS Course – Pankaja Naik
 Concise text book of Biochemistry (3rd edition) 2001, T.N. Pattabiraman
 Nutritional Biochemistry 1995, S. Ramakrishnan and S. V. Rao
 Lecture notes in Biochemistry 1984, J. K. Kandlish

Reference Books :

Test book of Biochemistry with clinical correlations 1997, T. N. Devlin
 Harpers Biochemistry, 1996., R. K. Murray et.al
 Basic and applied Dental Biochemistry, 1979, R.A.D. Williams & J.C. Elliot.

DENTAL ANATOMY, EMBRYOLOGY AND ORAL HISTOLOGY

INTRODUCTION

Dental Anatomy including Embryology and Oral Histology - a composite of basic Dental Sciences and their clinical applications.

SKILLS

The student should acquire basic skills in :

Carving of crowns of permanent teeth in wax.

Microscopic study of Oral tissues.

Identification of Deciduous & Permanent teeth

Age estimation by patterns of teeth eruption from plaster casts of different age groups.

OBJECTIVES :

After a course on Dental Anatomy including Embryology and Oral Histology,

1. The student is expected to appreciate the normal development, morphology, structure and functions of oral tissues and variations in different pathological / non pathological states

The student should understand the histological basis of various dental treatment procedures and physiologic ageing process in the dental tissues.

3. The students must know the basic knowledge of various research methodologies.

I. TOOTH MORPHOLOGY

1. Introduction to tooth morphology :

- ◆ Human dentition, types of teeth & functions, Palmer's & Binomial notation systems, tooth surfaces, their junctions - line angles & point angles, definition of terms used in dental morphology, geometric concepts in tooth morphology, contact areas & embrasures - clinical significance.

2. Morphology of permanent teeth :

- ◆ Description of individual teeth, alongwith their endodontic anatomy and including a note on their chronology of development differences between similar class of teeth and identification of individual teeth.
- ◆ Variations and Anomalies commonly seen in individual teeth

3. Morphology of Deciduous teeth :

- ◆ Generalized differences between Deciduous & Permanent teeth
- ◆ Description of individual deciduous teeth, including their chronology of development endodontic anatomy, differences between similar class of teeth & identification of individual teeth

4. Occlusion :

- ◆ Definition, factors influencing occlusion - basal bone, arch, individual teeth, external and internal forces and sequence of eruption.
- ◆ Inclination of individual teeth - compensatory curves.
- ◆ Centric relation and centric occlusion - protrusive, retrusive and lateral occlusion.
- ◆ Clinical significance of normal occlusion.
- ◆ Introduction to and classification of Malocclusion.

II. ORAL EMBRYOLOGY :

Brief review of development of face, jaws, lip, palate & tongue, with applied aspects.

Development of teeth :

- ◆ Epithelial mesenchymal interaction, detailed study of different stages of development of crown, root & supporting tissues of tooth & detailed study of formation of calcified tissues.
- ◆ Applied aspects of disorders in development of teeth.

3. Eruption of deciduous and permanent teeth.

- ◆ Mechanisms in tooth eruption, different theories & histology of eruption, formation of dentogingival junction, role of gubernacular cord in eruption of permanent teeth.
- ◆ Clinical or applied aspects of disorders of eruption.

4. Shedding of teeth.

- ◆ Factors & Mechanisms of shedding of deciduous teeth.
- ◆ Complications of shedding.

III ORAL HISTOLOGY

1. Detailed microscopic study of Enamel, Dentine, Cementum and Pulp tissue. Age changes and Applied aspects (clinical and forensic significance) of histological consideration. Fluoride applications, transparent dentine; dentine hypersensitivity, reaction of pulp tissue to varying insults to exposed dentine ; Pulp calcifications & Hypercementosis.

2. Detailed microscopic study of Periodontal ligament and alveolar bone, age changes, histological changes in periodontal ligament and bone in normal and orthodontic tooth movement, applied aspects of alveolar bone resorption.

Detailed microscopic study of Oral Mucosa, variation in structure in relation to functional requirements, mechanisms of keratinization, clinical parts of gingiva, Dentogingival and Mucocutaneous junctions and lingual papillae. Age changes and clinical considerations.

Salivary Glands :

- ◆ Detailed microscopic study of acini and ductal system.
- ◆ Age changes and clinical considerations.

5. T.M. Joint :

- ◆ Review of basic anatomical aspects and microscopic study and clinical considerations.

6. Maxillary sinus :

- ◆ Microscopic study, anatomical variations, functions and clinical relevance of maxillary sinus in dental practice.

7. Processing of Hard and soft tissues for microscopic study :

- ◆ Ground sections, decalcified sections and routine staining procedures

8. Basic histochemical staining patterns of oral tissues.

IV. ORAL PHYSIOLOGY

1. Saliva :

- ◆ Composition of saliva - variations, formation of saliva and mechanisms of secretion, salivary reflexes, brief review of secretomotor pathway, functions, role of saliva in dental caries and applied aspects of hyper and hypo salivation.

2. Mastication :

- ◆ Masticatory force and its measurement - need for mastication, peculiarities of masticatory muscles, masticatory cycle, masticatory reflexes and neural control of mastication.

3. Deglutition :

- ◆ Review of the steps in deglutition, swallowing in infants, neural control of deglutition and dysphagia.

4. Calcium Phosphorous and fluoride metabolism :

- ◆ Source, requirements, absorption, distribution, functions and excretion, clinical considerations, hypo & hypercalcemia & hyper & hypo phosphatemia & fluorosis.

5. Theories of Mineralization :

- ◆ Definition, mechanisms, theories & their drawbacks.
- ◆ Applied aspects of physiology of mineralization, pathological considerations - calculus formation.

6. Physiology of Taste :

- ◆ Innervations of taste buds and taste pathway, physiologic basis of taste sensation, age changes and applied aspects - taste disorders.

7. Physiology of speech

- ◆ Review of basic anatomy of larynx and vocal cords.
- ◆ Voice production, resonators, production of vowels and different consonants - Role of palate, teeth and tongue.
- ◆ Effects of dental prosthesis and appliances on speech and basic speech disorders.

RECOMMENDED TEXT BOOKS :

Orban's Oral Histology & Embryology - S. N. Bhaskar.

Oral Development & Histology - James & Avery

Wheeler's Dental Anatomy, Physiology & Occlusion - Major M, Ash

Dental Anatomy - its relevance to dentistry - Woelfel & Scheid

Applied Physiology of the mouth - Lavelle

Physiology & Biochemistry of the mouth - Jenkins

4. GENERAL PATHOLOGY

AIM :

At the end of the course the student should be competent to :

Apply the scientific study of disease processes, which result in morphological and functional alterations in cells, tissues and organs to the study of pathology and the practice of dentistry.

OBJECTIVES :

Enabling the student

To demonstrate and apply basic facts, concepts and theories in the field of Pathology.

To recognize and analyze pathological changes at macroscopically and microscopical levels and explain their observations in terms of disease processes.

3. To integrate knowledge from the basic sciences, clinical medicine and dentistry in the study of pathology.

To demonstrate understanding of the capabilities and limitations of morphological Pathology in its contribution to medicine, dentistry and biological research.

To demonstrate ability to consult resource materials outside lectures, laboratory and tutorial classes.

COURSE CONTENT

A. General Pathology

Introduction to Pathology				
Terminologies				
The cell in health				
The normal cell structure				
The cellular functions				
Pathology and Pathogenesis of Disease				
Cell Injury				
Types - congenital				
Acquired				
Mainly Acquired causes of disease				
(Hypoxic injury, chemical injury, physical injury, immunological injury)				
Regenerations				
Amyloidosis				
Fatty change				
Cloudy swelling				
Hyaline change, mucoid degeneration				
Cell death & Necrosis				
Apoptosis				
Def, causes, features and types of necrosis				

Gangrene - Dry, wet, gas

Pathological Calcification

(Dystrophic and metastatic)

Inflammation

- Definition, causes types, and features Acute inflammation

a. The vascular response

The cellular response

Chemical Mediators

The inflammatory cells

Fate

Chronic inflammation

Granulomatous inflammation

Healing

- Regeneration

- Repair

Mechanism

Healing by primary intention

Healing by secondary intention

Fracture healing

Factors influencing healing process

Complications

Tuberculosis

- Epidemiology

- Pathogenesis (Formation of tubercle)

- Pathological features of Primary and secondary

TB - Complications and Fate

Syphilis

- Epidemiology

- Types and stages of syphilis

- Pathological features

- Diagnostic criteria

- Oral lesions

Typhoid

- Epidemiology

- Pathogenesis

- Pathological features

- Diagnostic criteria.

Thrombosis

Definition, Pathophysiology

Formation, complications & Fate of a thrombus.

Embolism

Definition

Types

Effects

Ischaemia and infraction

Definition, etiology, types

Infraction of various organs.

Derangements of body fluids

Oedema - Pathogenesis

Different types

Disorders of circulation

Hyperaemia

Shock

Nutritional Disorders

Common Vitamin Deficiencies

Immunological mechanisms in disease

Humoral & cellular immunity

Hypersensitivity & autoimmunity

AIDS and Hepatitis

Hypertension

Definition, classification

Pathophysiology

Effects in various organs.

Diabetes Mellitus

Def, Classification, Pathogenesis, Pathology in different organs.

Adaptive disorders of growth

Atrophy & Hypertrophy, Hyperplasia, Metaplasia and Dysplasia

General Aspects of neoplasia

Definition, terminology, classification

Differences between benign and malignant neoplasms

The neoplastic cell

Metastasis

Etiology and pathogenesis of neoplasia, Carcinogenesis

Tumour biology.

Oncogenes and anti oncogenes

Diagnosis

Precancerous lesions

j Common specific tumours, Sq papilloma & Ca, Basal cell Ca, Adenoma & Adenoca, Fibroma & Fibrosarcoma, Lipoma and

liposarcoma B. Systematic Pathology -

Anaemias

Iron Deficiency anaemia, Megaloblastic Anaemia

Leukaemias

Acute and chronic leukaemias, Diagnosis and clinical features

Diseases of Lymph nodes

Hodgkins disease, Non Hodgkins lymphoma, Metastatic carcinoma

Diseases of Oral cavity

Lichen planus, stomatitis, Leukoplakia, Sq cell ca, Dental caries, Dentigerous cyst,

Ameloblastoma

Disease of salivary glands

Normal structure, sialadenitis, Tumours.

Common diseases of Bones

Osteomyelitis, Metabolic bone diseases, Bone Tumours, Osteosarcoma,

Osteocalstoma, Giant cell Tumours, Ewing:s sarcoma, fibrous dysplasia,

Aneurysmal bone cyst.

Diseases of Cardiovascular system

Cardiac failure

Congenital heart disease - ASD, VSD,

PDA Fallots Tetrolgy

Infective Endocarditis

Atherosclerosis

Ischaemic heart Disease

Haemorrhagic Disorders

Coagulation cascade

Coagulation disorders

Platelet function

Platelet disorders

Practicals

Urine - Abnormal constituents

Sugar, albumin, Ketone bodies

Urine - Abnormal constituents

Blood, bile salts, bile pigments

Haemoglobin (Hb) estimation

Total WBC count

Differential WBC count

Packed cell volume (PCV,) erythrocyte sedimentation Rate (ESR)

Bleeding time & Clotting time

Histopathology

Tissue Processing

Staining

Histopathology slides

Acute appendicitis, Granulation tissue, fatty liver.

Histopathology slides.

CVC lung, CVC liver, kidney amyloidosis

11. Histopathology slides

tuberculosis, Actinomycosis,

Rhinosporidiosis 12. Histopathology slides

Papilloma, Basal cell Ca, Sq cell

Ca 13. Histopathology slides

Osteosarcoma, osteoclastoma,

fibrosarcoma 14. Histopathology slides

Malignant melanoma, Ameloblastoma

Adenoma 15. Histopathology slides

Mixed parotid tumour, metastatic

carcinoma in lymph node

List of Textbooks

Robins - Pathologic Basis of Disease Cotran, Kumar, Robbins

Andersons Pathology Vol 1 & 2 Editors - Ivan Damjanov & James Linder

Wintrobess clinical Haematology Lee, Bithell, Forester, Athens, Lukens

MICROBIOLOGY

AIM:

To introduce the students to the exciting world of microbes. To make the students aware of various branches of microbiology, importance, significance and contribution of each branch to mankind and other fields of medicine. The objectives of teaching microbiology can be achieved by various teaching techniques such as :

Lecturers

Lecture Demonstrations

Practical exercises

Audio visual aids

Small group discussions with regular feed back from the students.

OBJECTIVE :

A. KNOWLEDGE AND UNDERSTANDING

At the end of the Microbiology course the student is expected to:

Understand the basics of various branches of microbiology and able to apply the knowledge relevantly

Apply the knowledge gained in related medical subjects like General Medicine and General Surgery and Dental subjects like Oral Pathology, Community Dentistry, Periodontics Oral Surgery, Pedodontics, Conservative Dentistry and Oral medicine in higher classes.

Understand and practice various methods of sterilization and disinfection in dental clinics.

Have a sound understanding of various infectious diseases and lesions in the Oral Cavity.

A. SKILLS

Student should have acquired the skill to diagnose, differentiate various oral lesions.

Should be able to select, collect and transport clinical specimens to the laboratory.

Should be able to carry out proper aseptic procedures in the dental clinic

A brief syllabus of Microbiology is given as follows ;

A. GENERAL MICROBIOLOGY

Histology, Introduction, Scope, Aims and Objectives

Morphology and Physiology of Bacteria

Detail account of Sterilization and Disinfection

Brief account of Culture media and Culture techniques

Basic knowledge of selection, collection, transport, processing of clinical specimens and identification of bacteria.

6. Bacterial Genetics and Drug Resistance in bacteria

B. IMMUNOLOGY

Infection - Definition, Classification, Source, mode of transmission and types of infectious disease.

Immunity

Structure and functions of Immune system

The complement system

Antigen

Immunoglobulins : Antibodies - General structure and the role played in defense mechanism of the body.

Immune response

Antigen - Antibody reactions - with reference to clinical utility

Immuno deficiency disorders - a brief knowledge of various types of immuno deficiency disorders - A sound knowledge of immuno deficiency disorders relevant to dentistry.

Hypersensitivity reactions

Autoimmune disorders - Basic knowledge of various types - sound knowledge of autoimmune disorders of oral cavity and related structure

Immunology of Transplantation and Malignancy

Immunehaematology

C. SYSTEMATIC BACTERIOLOGY :

Pyogenic cocci - Staphylococcus, Streptococcus, Pneumococcus, Gonococcus, Meningococcus - brief account of each coccus - detailed account of mode of spread, laboratory diagnosis, chemo therapy and prevention - Detailed account of cariogenic streptococci

Corynebacterium diphtheriae - mode of spread, important clinical feature, Laboratory diagnosis , Chemotherapy and Active immunization.

Mycobacteria - Tuberculosis and Leprosy

Clostridium - Gas gangrene, food poisoning and tetanus.

Non - sporing Anaerobes - in, brief about classification and morphology, in detail about dental pathogens - mechanism of disease production and prevention.

Spirochaetes - Treponema Pallidum - detailed account of Oral Lesions of syphilis, Borrelia vincentii

7. Actinomycetes.

D. VIROLOGY

Introduction

General properties, cultivation, host - virus interaction with special reference to interferon 3,
Brief account of Laboratory diagnosis, Chemotherapy and immuno prophylaxis in general

4. A few viruses of relevance to dentistry

- Herpes Virus
- Hepatitis B Virus - brief about other types
- Human Immunodeficiency virus (HIV)
- Mumps Virus
- Brief - Measles and Rubella Virus

5. Bacteriophage - Structure and Significance

E. MYCOLOGY

Brief Introduction

candidosis - in detail

Briefly on oral lesions of systemic mycoses.

F. PARASITOLOGY:

Brief introduction - protozoans and helminths

Brief knowledge about the mode of transmission and prevention of commonly seen parasitic infection in the region.

RECOMMENDED BOOKS FOR REGULAR READING

Text book of Microbiology - A. Ananthanarayan & C.K. Jayaram Paniker

Medical Microbiology - David Greenwood etal

BOOKS FOR FURTHER READING / REFERENCE

Microbiology - Prescott, etal

Microbiology - Bernard D. Davis, etal

Clinical & Pathogenic Microbiology - Barbara J. Howard, etal

Mechanisms of Microbial diseases - Moselio Schaechter, etal

Immunology an Introduction - Tizard

Immunology 3rd edition - Evan Roitt, etal

5.GENERAL AND DENTAL PHARMACOLOGY AND THERAPEUTICS

GOAL :

The broad goal of teaching under graduate students in pharmacology is to inculcate rational and scientific basis of therapeutics keeping in view of dental curriculum and Profession.

OBJECTIVES :

At the end of the course the student shall be able to :

Describe the pharmacokinetics and pharmacodynamics of essential and commonly used drugs in general and in dentistry in particular

List the indications, contraindications; interactions, and adverse reactions of commonly used drugs with reason.

Tailor the use of appropriate drugs in disease with consideration to its cost, efficacy safety for individual and mass therapy needs.

Indicate special care in prescribing, common and essential drugs in special medical situations such as pregnancy, lactation, old age, renal, hepatic damage and immuno compromised patients.

Integrate the rational drug therapy in clinical pharmacology

Indicate the principles underlying the concepts of „Essential Drugs“.

SKILLS :

At the end of the course the student shall be able to:

Prescribe drugs for common dental and medical ailments

To appreciate adverse reactions and drug interactions of commonly used drugs.

Observe experiments designed for study of effects of drugs

Critically evaluate drug formulations and be able to interpret the clinical pharmacology of marketed preparations commonly used in dentistry.

INTEGRATION : practical knowledge of use of drugs in clinical practice will be acquired through integrated teaching with clinical departments.

LECTURE:

GERNERAL PHARMACOLOGY :

General principles of pharmacology ; sources and nature of drugs dosage forms; prescription writing; pharmacokinetics (absorption, distribution, metabolism and excretion of drugs), mode of action of drugs, combined effect of drugs, receptor mechanism of drug action, factors modifying drug response, adverse drug reactions; drug interactions, Implications of General Principles in clinical dentistry.

CNS drugs; General anaesthetics, Hypnotics, analgesics psychotropic drugs, anti-epileptics, muscle relaxants, local anaesthetics, implications of these drugs in clinical dentistry.

Autonomic drugs ; sympathomimetics, antiadrenergic drugs parasympothomimetics and parasympatholytics, Implications of Autonomic drugs in clinical dentistry.

Cardiovascular drugs ; cardiac stimulants ; antihypertensive drugs, vasopressor agents, treatment of shock, Antianginal agents and diuretics, Implications of these drugs in clinical dentistry.

Autocoids :

Histamine, antihistamines, prostaglandins, leukotriens and bronchodilators, Implications of Autocoids in Clinical dentistry.

Drugs acting on blood : coagulants and anticoagulants, hematinics, Implications of these drugs in clinical dentistry.

G.I.T. Drugs, Purgatives, anti-diarrhoeal, antacids, anti-emetics, implications of these drugs in clinical dentistry.

Endocrines; Emphasis on treatment of diabetes and glucocorticoids, thyroid and antithyroid agents, drugs affecting calcium balance and anabolic steroids, Implications of these drugs in clinical dentistry.

Chemotherapy : Antimicrobial agents (against bacteria, anaerobic infections, fungi, virus and broad spectrum). Infection management in dentistry. Pharmacotherapy of Tuberculosis, leprosy and chemotherapy of malignancy in general. Implications of chemotherapy in clinical dentistry.

Vitamins : Water soluble vitamins, Vit. D, Vit.K. and Vit E, Implications of Vitamins in clinical dentistry.

Pharmacotherapy of emergencies in dental office and emergency drugs tray Implications of Pharmacotherapy in clinical dentistry.

Chealating agents - BAL, EDTA and desferrioxamine,

II DENTAL PHARMACOLOGY

Anti - septics, astringents, obtundents, mummifying agents, bleaching agents, styptics, disclosing agents, dentifrices, mouth washes, caries and fluorides.

Pharmacotherapy of common oral conditions in dentistry

Practicals and Demonstrations:

To familiarize the student with the methodology: prescription writing and dispensing. Rationale of drug combinations of marked drugs.

LIST OF BOOKS RECOMMENDED FOR READING AND REFERENCE

R.S. Satoskar, Kale Bhandarkars Pharmacology and Pharmacolherapentics, 10th Edition, Bombay Popular Prakashan 1991.

Bertam G Katzung, Basic and Clinical pharmacology 6th ed. Appleton & Lange 1997.

Lauerence D.R. Clinical Pharmacology 8th ed. Churchill Livingstone 1997.

Satoskar R.S. & Bhandarkar S.D., Pharmacology and Pharmacotherapeutics part I & part ii, 13th Popular prakashan Bombay 1993.

Tripathi K.D. Essentials of Medical Pharmacology 4th ed Jaypee Brothers 1999.

6. DENTAL MATERIALS

The science of Dental Material has undergone tremendous changes over the years. Continued research has led to new material systems and changing concepts in the dental field. Interlinked with various specialized branched of chemistry, practically all engineering applied sciences and biological characteristics, the science of dental material emerged as a basic sciences in itself with its own values and principles.

INTRODUCTION

AIMS :

Aim of the course is to present basic chemical and physical properties of Dental materials as they are related to its manipulation to give a sound educational background so that the practice of the dentistry emerged from art to empirical status of science as more information through further research becomes available. It is also the aim of the course of Dental materials to provide with certain criteria of selection and which will enable to discriminate between facts and propaganda with regards to claims of manufactures.

OBJECTIVES :

To understand the evolution and development of science of dental material

To explain purpose of course in dental materials to personnel concerned with the profession of the dentistry. Knowledge of physical and chemical properties. Knowledge of biomechanical requirements of particular restorative procedure. An intelligent compromise of the conflicting as well as co-ordinating factors into the desired Ernest. Laying down standards or specifications of various materials to guide to manufactures as well as to help professionals. Search for newer and better materials which may answer our requirements with greater satisfaction. To understand and evaluate the claims made by manufactures of dental materials.

NEED FOR THE COURSE

The profession has to rise from an art ot a science, the need for the dentist to possess adequate knowledge of materials to exercises his best through knowledge of properties of different of types of materials. The growing concern of health hazards due to mercury toxicity,

inhalation of certain vapour or dust materials, irritations and allergic reaction to skin due to contact of materials. Materials causing irritation of oral tissues, pH of restorative materials causing inflammation and necrosis of pulp which is a cause for the dentist to possess wider knowledge of physical, chemical and biological properties of materials being used. For the protection for the patient and his own protection certain criteria of selection are provided that will enable the dentist to discriminate between facts and propaganda, which will make a material biologically acceptable.

SCOPE

The dental materials is employed in mechanical procedures including restorative dentistry such as Prosthodontics, endodontics, periodontal, Orthodontics and restorative materials. There is scarcely a dental procedure that does not make use of dental materials in one form or another and therefore the application of dental material is not limited to any one branch of dentistry.

Branches such as minor surgery and periodontics require less use of materials but the physical and chemical characters of materials are important in these fields.

The toxic and tissue reaction of dental materials and their durability in the oral cavity where the temperature is between 32 & 37 degree centigrade, and the ingestion of hot or cold food ranges from 0-70 degree centigrade. The acid and alkalinity of fluids shown pH varies from 4 to 8.5. The load on 1 sq. mm of tooth or restorative materials can reach to a level as high as many kilograms. Thus the biological properties of dental materials cannot be separated from their physical and chemical properties.

2) STRUCTURE OF MATTER AND PRINCIPLES OF ADHESION

Change of state, inter atomic primary bonds, inter atomic secondary bonds, inter atomic bond distance and bonding energy, thermal energy, crystalline structure, non crystalline structures, diffusion, adhesion and bonding and adhesion to tooth structures.

3) IMPORTANT PHYSICAL PROPERTIES APPLICABLE TO DENTAL MATERIALS

Physical properties are based on laws of mechanics, acoustics, optics, thermodynamics, electricity, magnetism, radiation, atomic structure or nuclear phenomena, Hue, value chroma and translucency physical properties based on laws of optics, dealing with phenomena of light, vision and sight. Thermal conductivity and coefficient of thermal expansion are physical properties based on laws of thermodynamics. Stress, strain proportional limit, elastic limit yield strength, modulus of elasticity, flexibility, resilience, impact, impact strength, permanent deformation, strength, flexure strength fatigue, static fatigue, toughness, brittleness, ductility and malleability, hardness, abrasion resistance, relaxation, rheology, Thixotropic, creep, static creep, dynamic creep, flow, color, three dimensional colour - hue values, chroma, Munsell system, metamersim, fluorescence, physical properties of tooth stress during mastication.

4) BIOLOGICAL CONSIDERATIONS IN USE OF DENTAL MATERIALS

Materials used are with the knowledge of appreciation of certain biological considerations for use in oral cavity. Requirement of materials with biological compatibility. Classification of material from perspective of biological compatibility. eg. contact with soft tissues, affecting vitality of pulp, used for root canal fillings, affecting hard tissues of teeth, laboratory materials that could be accidentally be inhaled or ingested during handling. Hazards associated with materials : pH effecting pulp, polymers causing chemical irritation, mercury toxicity, etc. Microleakage, Thermal changes, Galvanism, toxic effect of materials. Biological evaluation for systematic toxicity, skin irritation, mutagenicity and carcinogenicity. Disinfection of dental materials for infection control.

5) GYPSUM & GYPSUM PRODUCTS

Gypsum - its origin chemical formula, products manufactured from gypsum.

Dental plaster, Dental stone, Die stone, high strength, high expansion stone.

Application and manufacturing procedure of each, macroscopic and microscopic structure of each. Supplied as and commercial names.

Chemistry of setting, setting reaction, theories of setting, gauging water, Microscopic structure of set material.

Setting time : working time and setting time, Measurement of setting time and factors controlling setting time.

Setting expansion, Hygroscopic setting expansion - factors affecting each

Strength : wet strength, dry strength, factors affecting strength, tensile strength Slurry - need and use.

Care of cast.

ADA classification of gypsum products

Description of impression plaster and dental investment

Manipulation including recent methods or advanced

methods. Disinfection : infection control, liquids, sprays,

radiation Method of use of disinfectants

Storage of material - shelf life

6) IMPRESSION MATERIALS USED IN DENTISTRY

Impression plaster, Impression compound, Zinc oxide eugenol impression paste and bite registration paste incl., non eugenol paste, Hydrocolloids, reversible and irreversible,

Elastomeric impression materials. Polysulphide, Condensation silicones, Addition silicones,

Polyether, visible light cure polyether urethane dimethacrylate, Historical background and development of each impression material,

Definition of impression, Purpose of making impression, Ideal properties required and application of material, classification as per ADA specification, general & individual impression material.

Application and their uses in different disciplines, Marketed as and their commercial names, Mode of supply and mode of application bulk / wash impression. Composition, chemistry of setting, Control of setting time, Type of impression trays required, Adhesion to tray manipulation, instruments and equipments required. Techniques of impression, storage of impression, (Compatibility with cast and die material). Any recent advancements in material and mixing devices. Study of properties : Working time, setting time, flow, accuracy, strength, flexibility, tear strength, dimensional stability, compatibility with cast & die materials incl., electroplating Biological properties : tissue reaction, Shelf life & storage of material, Infection control-disinfection, Advantages & disadvantages of each material.

7) SYNTHETIC RESINS USED IN DENTISTRY

Historical, background and development of material, Denture base materials and their classification and requirement

Classification of resins

Dental resins - requirements of dental resins, applications, polymerization, polymerization mechanism stages in addition polymerization, inhibition of polymerisation, co polymerization, molecular weight, crosslinking, plastixizers, Physical properties of polymers, polymer structures types of resins.

ACRYLIC RESINS :

Mole of polymerization : Heat activated, Chemically activated, Light activated, Mode of supply, application, composition, polymerization reaction of each. Technical considerations : Methods of manipulation for each type of resin. Physical properties of denture base resin.

Miscellaneous resins & techniques. Repair resins, Relining and rebasing. Short term and long - term soft - liners, temporary crown and bridge resins, Resin impression trays, Tray materials, Resin teeth materials in maxillofacial prosthesis, Denture cleansers, Infection control in detail, Biological properties and allergic reactions.

RESTORATIVE RESINS

Historical background, Resin based restorative materials, Unfilled & filled, Composite restorative materials, Mode of supply, Composition, Polymerisation mechanisms : Chemically activated. Light activated, Dual cure : Degree of conversion, Polymerisation shrinkage

Classification of Composites : Application, co,position and proerties of each Composites of posterior teeth, Prosthodontics resins for veneering. Biocompatibility - microleakage, pulpal reaction, pulpal protection Manipulation of composites: Techniques of insertion of Chemically

activated, light activated, dual cure Polymerisation, finishing and polishing of restoration, Repair of composites Direct bonding Bonding: Need for bonding, Acid - etch technique, Enamel bonding, Dentin bonding agents. Mode of bonding, Bond strength, Sandwich technique its indication and procedure. Extended application for composites : Resins for restoring eroded teeth, Pit and fissure sealing, Resin inlays system - Indirect & direct, Core build up, Orthodontics applications.

8) METAL AND ALLOYS :

Structure and behaviour of metals, Solidification of metals, mechanism of crystallization amorphous & crystalline. Classification of alloys, Solid solutions, Constitutes or equilibrium phase diagrams : Electric alloys, Physical properties, Peritectic alloys, Solid state reaction other binary systems : Metallography & Heat treatment. Tarnish and corrosion. Definition : cause of corrosion, protection against corrosion., Corrosion of dental restorations, clinical significance of galvanic current. Dental Amalgam.

History :

Definition of dental amalgam, application, Alloy classification, manufacture of alloy powder composition - available as.

Amalgamation : setting reaction & resulting structure, properties, Microleakage

Dimensional stability, Strength, Creep, Clinical performance

Manipulation : Selection of alloy proportioning, mechanism of trituration, condensation, carving & finishing. Effect of dimensional changes, Marginal deterioration., Repair of amalgam, mercury toxicity, mercury hygiene.

DIRECT FILLING GOLD:

Properties of pure gold, mode of adhesion of gold for restoration forms of direct filling gold for using as restorative material

Classification : gold Foil, electrolytic precipitate, powdered gold.

Manipulation : Removal of surface impurities and compaction of direct filling gold. Physical properties of compacted gold, Clinical performance.

DENTAL CASTING ALLOYS :

Historical background, desirable properties of casting alloys.

Alternatives to cast metal technology: direct filling gold, amalgam, mercury free condensable intermetallic compound - an alternative to metal casting process CAD-CAM process for metal & ceramic inlays - without need of impression of teeth or casting procedure, pure titanium, most bio compatible metal which are difficult to cast can be made into crowns with the aid of CAD -CAM technology. Another method of making classification of casting alloys : By function & description.

Recent classification, High noble (HN), Noble (N) and predominantly base metal (PB)

Alloys for crown & bridge, metal ceramic & removable partial denture. Composition, function constituents and application, each alloy both noble and base metal. Properties of alloys: Melting range; mechanical properties, hardness, elongation, modulus of elasticity, tarnish and corrosion.

Casting shrinkage and compensation of casting shrinkage. Biocompatibility - Handling hazards & precautions of base metal alloys; casting investments used. Heat treatment : Softening & hardening heat treatment. Recycling of metals, Titanium alloys & their application, properties & advantages. Technical considerations in casting. Heat source, furnaces.

9) DENTAL WAXES INCLUDING INLAY CASTING WAX

Introduction and importance of waxes : Sources of natural waxes and their chemical nature.

Classification of Waxes :

Properties : melting range, thermal expansion, mechanical properties, flow & residual stresses, ductility. Dental Wax : Inlay wax : Mode of supply : Classification & composition, Ideal requirements : properties of inlay wax : Flow, thermal properties Wax distortion & its causes.

Manipulation of inlay wax : instruments & equipment required, including electrically heated instruments metal tips and thermostatically controlled wax baths.

Other waxes : Applications, mode of supply & properties.

Casting Wax, Base plate wax, Processing wax, Boxing wax, Utility wax, Sticky wax, Impression wax for corrective impressions, Bite registration wax.

10) DENTAL CASTING INVESTMENTS

Definition, requirements, classification

Gypsum bonded - classification, Phosphate bonded, silica bonded

Mode of Supply : Composition, application, setting mechanism, setting time & factors controlling.

Expansions : setting expansion, Hygroscopic Setting expansion, & thermal expansion : factors affecting. Properties : Strength porosity, and fineness & storage. Technical consideration :

For casting procedure Preparation of die, Wax pattern, spruing, investing, control of shrinkage compensation, wax burnout, and heating the invested ring, casting. Casting machines, source of heat for melting the alloy. Defect in casting.

11) SOLDERING, BRAZING AND WELDING

Need of joining dental appliances, Terms & Definition

Solders : Definition, ideal requirement types of solders - Soft & hard and their fusion temperature, application. Mode of supply of solders, composition and selection, properties.

Tarnish & corrosion resistance mechanical properties, microstructure of soldered joint. Fluxes & Anti fluxed : Definition, function, Types, commonly used fluxes & their selection Technique of soldering & Brazing : Free hand soldering and investment, steps and procedure. Welding : Definition, application, requirements, procedure, weld decay - causes and how to avoid it. Laser welding.

WROUGHT BASE METAL ALLOYS

Applications and different alloys used mainly for orthodontics purpose

Stainless steel

Cobalt chromium nickel

Nickel titanium

Beta titanium

Properties required for orthodontic wires, working range, springiness, stiffness, resilience, Formability, ductility, ease of joining, corrosion resistance, stability in oral environment, bio compatibility

Stainless steels : Description, type, composition & properties of each type. Sensitisation & stabilization, Mechanical properties - strength, tensile, yield strength, KHN. Braided & twisted wires their need, Solders for stainless steel, Fluxes, welding

1. Wrought cobalt chromium nickel alloys, composition, allocation, properties, heat treatment, Physical properties

Nickel - Titanium alloys, shape, memory & super elastic

Titanium alloys, application, composition, properties, welding, Corrosion resistance.

12) DENTAL CEMENTS

Definition & Ideal requirements:

Cement : Silicate, Glass ionomer, metal modified glass ionomer, resin modified glass ionomer, zinc oxide eugenol, modified zinc oxide eugenol, zinc phosphate, zinc silico phosphate, zinc poly carboxylate, Cavity liners and cement bases, Varnishes Calcium hydroxide, Gutta Percha.

Application, classification (general and individual), setting mechanism, mode of supply, Properties, factors affecting setting, special emphasis on critical procedures of manipulation and protection of cement, mode of adhesion, biomechanics of caries inhibition.

Agents for pulpal protection., Modifications and recent advances, Principles of cementation. Special emphasis on cavity liners and cement bases and luting agents.

13) DENTAL CERAMICS

Historical background & General applications.

Dental ceramic : definition, classification, application, mode of supply, manufacturing procedure, methods of strengthening. Properties of fused ceramic : Strength and factors affecting, modulus of elasticity, surface hardness, wear resistance, thermal properties, specific gravity, chemical stability, esthetic properties, biocompatibility, technical considerations.

Metal Ceramic (PFM) : Alloys - types and composition of alloys. Ceramic - Type and composition.

Metal Ceramic Bond : Nature of bond. Bonding using electro deposition, foil copings, bonded platinum foil, swaged gold alloy foil coping. Technical considerations for porcelain and porcelain fused metal restorations. Recent advances - all porcelain restorations, Manganese core, injection moulded castable ceramics, glass infiltrated alumina core ceramic (In ceram), ceramic veneers, inlays and onlays and CAD - CAM ceramic. Chemical attack of ceramic by fluoride. Porcelain furnaces.

14) ABRASION & POLISHING AGENTS

Definition of abrasion and polishing. Need of abrasion and polishing. Types of abrasives : Finishing, polishing & cleaning. Types of abrasives : Diamond, Emery, aluminium oxides garnet, pumice, Kieselgurh, Tripoli, rouge, tin oxide, chalk, chromic oxide, sand, carbides, diamond, zirconium silicate Zinc oxide.

ABRASIVE ACTION :

Desirable characteristics of an abrasive, Rate of abrasion, size of particle, pressure and speed Grading of abrasive & polishing agents. Binder, polishing materials & procedures used. Technical consideration - Material and procedure used for abrasion and polishing Electrolytic polishing and burnishing

15) DIE AND COUNTER DIE MATERIALS INCLUDING ELECTROFORMING AND ELECTROPOLISHING

types - Gypsum products, Electroforming, Epoxy resin, amalgam

DENTAL IMPLANTS : Evolution of dental implants, types and materials

MECHANICS OF CUTTING : Burns and points

At the end of the course the student should have the knowledge about the composition, properties, manipulative techniques and their various commercial names. The student should also acquire skills to select and use the materials appropriately for laboratory and clinical use.

RECOMMENDED BOOKS

Philips Science of Dental Materials : 10th edn. - Kenneth J. Anusavice

Restorative Dental Materials - 10 edn. Robert G. Craig

Notes on Dental Materials - E.C. combe

PRE CLINICAL CONSERVATIVE DENTISTRY LABORATORY EXERCISES.

Identification and study of handcutting instrument chisels, gingival margin trimmers, excavators and hatchet.

Identification and use of rotary cutting instruments in contra angle hand pieces burs (Micromotor)

Preparation class I and extended class I and class II and MODs and class V amounting to 10 exercises in plaster models.

4. 10 exercises in mounted extracted teeth of following class I, 4 in number class I extended cavities 2, class II 4 in number and Class V 2 in number. Cavity preparation base application matrix and wedge placement restoration with amalgam.

Exercises on phantom head models which included cavity preparation base and varnish application matrix and wedge placement followed by amalgam restoration.

Class I	5
Class I with extension	2
Class II	10
Class H mods	2
Class V and III for glass ionomers	4
Class V for amalgam	2

Polishing of above restorations

Demonstration of class III and class V cavity preparation. For composites on extracted tooth completing the restoration.

Polishing and finishing of the restoration of composites.

Identification and manipulation of varnish bases like Zinc Phosphate, Poly carboxylate, Glass Ionomers, Zinc Oxide, Eugenol cements.

Identification and manipulation of various matrices, tooth separators and materials like composites and modified glass ionomer cements.

Cast Restoration

Preparation of Class II inlay cavity

Fabrication of wax pattern

sprue for inner attachment investing

Investing of wax pattern

Finishing and cementing of class II inlay in extracted tooth

Endodontics

Identification of basic endodontics instruments

Cornal access cavity preparation on extracted. Upper central incisors.

Determination of working length

Biomechanical Preparation of root canal space of central incisor

Obfuration of root canal spaces. Absens of cornal access cavity

Closure of access cavity

8 ORAL PATHOLOGY & ORAL MICROBIOLOGY

OBJECTIVES :

At the end of Oral pathology and Oral Microbiology course, the student should be able to comprehend -

The different types of pathological processes, that involve the oral cavity.

The manifestation of common diseases, their diagnosis and correlation with clinical pathological processes.

An understanding of the oral manifestations of systemic disease should help in correlating with the systemic physical signs and laboratory findings.

The student should understand the underlying biological principles governing treatment of oral disease.

The principles of certain basic aspects of Forensic Odontology.

SKILLS:

Microscopic study of common lesions affecting oral tissues through mocrosopic slides & projection slides.

Study of the disease process by surgical specimen

Study of teeth anomalies / polymorphisms through tooth specimens & plaster casts.

Microscopic study of plaque pathogens.

Study of haematological preparations (blood films) of anaemias & leukemias.

Basic exercises in Forensic Odontology such as histological methods of age estimation and appearance of teeth in injuries.

INTRODUCTION:

- A birds eye view of the different pathological processes involving the oral cavity & oral cavity involvement in systemic disease to be brought out. Interrelationship between General Medicine & General Surgery & Oral pathology to be emphasized.

Developmental disturbances of teeth, Jaws and soft tissues of oral & paraoral region :

- Introduction to developmental disturbances - Hereditary, Familial mutation, Hormonal etc. causes to be highlighted.

- Developmental disturbances of teeth - Etiopathogenesis, clinical features, radiological features & histopathological features as appropriate.

The size, shape, number, structure & eruption of teeth & clinical significance of the anomalies to be emphasized

- Forensic Odontology
- Developmental disturbances of jaws - size & shape of the jaws.
- Developmental disturbances of oral & paraoral soft tissues - lip & palate - clefts, tongue, gingiva, mouth, salivary glands & face.

Dental caries

- Etiopathogenesis, microbiology, clinical features, diagnosis, histopathology, immunology, prevention of dental caries & its sequelae.

Pulp & Periapical Pathology & Osteomyelitis

- Etiopathogenesis & interrelationship, clinical features, microbiology, histopathology & radiological features (as appropriate) of pulp & periapical lesions osteomyelitis.
- Sequelae of periapical abscess - summary of space infections, systemic complications & significance.

Periodontal Diseases :

- Etiopathogenesis, microbiology, clinical features, histopathology & radiological features (as appropriate) of gingivitis, gingival enlargements & periodontitis. Basic immunological mechanisms of periodontal disease to be highlighted.

Microbial infections of oral soft tissues :

- Microbiology, defence mechanisms including immunological aspects, oral manifestations, histopathology and laboratory diagnosis of common bacterial, viral & fungal infections namely :-

Bacterial : Tuberculosis, Syphilis, ANUG & its complications - Cancrum Oris.

Viral : Herpes Simplex, Varicella zoster, Measles, Mumps & HIV

infection. Fungal : Candidal infection, Aphthous Ulcers.

Common non - inflammatory diseases involving the jaws :

- Etiopathogenesis, clinical features, radiological & laboratory values in diagnosis of : Fibrous dysplasia, Cherubism, Osteogenesis Imperfecta Paget's disease, Cleidocranial dysplasia, Rickets, Achondroplasia, Marfan's syndrome & down's syndrome.

Diseases of TM joint :

- Ankylosis, summary of different types of arthritis & other developmental malformations, traumatic injuries & myofascial pain dysfunction syndrome.

Cysts of the Oral & Paraoral region :

- Classification, etiopathogenesis, clinical features, histopathology, laboratory & radiological features (as appropriate) of Odontogenic cysts, Non-Odontogenic cysts, Pseudocysts of jaws & soft tissue cysts of oral & paraoral region.

Tumours of the Oral Cavity

- Classification of Odontogenic, Non-Odontogenic & Salivary Gland Tumours. Etiopathogenesis, clinical features, histopathology, radiological features & laboratory diagnosis (as appropriate) of the following common tumours :

Odontogenic - all lesions.

Non - odontogenic

Benign Epithelial : Papilloma, Keratoacanthoma & Naevi.

Benign Mesenchymal - Fibroma, Aggressive fibrous lesions, Lipoma
Haemangioma, Lymphangioma Neurofibroma
Schwannoma, Chondroma, Osteoma & Tori

- Malignant Epithelial - Basal Cell Carcinoma, Verrucous Carcinoma,
Squamous Cell carcinoma &
Malignant Melanoma.

- Malignant Mesenchymal- Fibrosarcoma, Osteosarcoma, Giant cell
tumour, Chondrosarcoma, Angiosarcoma
Kaposi sarcoma, Lymphomas, Ewings sarcoma &
Other Reticuloendothelial tumours.

c) Salivary

- Benign Epithelial neoplasms - Pleomorphic Adenoma, Warthin's tumour,
& Oncocytoma

- Malignant Epithelial neoplasms - Adenoid Cystic Carcinoma
Mucoepidermoid Carcinoma,
Acinic Cell Carcinoma & Adenocarcinomas.

d) Tumours of Disputed Origin - e) Metastatic

Congenital Epulis & Granular Cell Myoblastoma.
Tumors metastasizing to & from oral cavity &
the routes of metastasis.

Traumatic, Reactive & Regressive lesions Oral Cavity :

- Pyogenic & Giant cell granuloma, exostoses Fibrous Hyperplasia, Traumatic Ulcer & Traumatic Neuroma.
- Attrition, Abrasion, Erosion, Bruxism, Hypercementosis, Dentinal changes, pulp calcifications & Resorption of teeth.

- Radiation effects of oral cavity, summary of physical & Chemical injuries including allergic reaction of the oral cavity.
- Healing of Oral wounds & complications - Dry socket.

Non neoplastic Salivary Gland Diseases :

- Sialolithiasis, Sialosis, sialadenitis, Xerostomia & ptyalism.

Systemic Diseases involving Oral Cavity ;

- Brief review & Oral manifestations, diagnosis & significance of common Blood, Nutritional, Hormonal & Metabolic diseases of Oral cavity.

Mucocutaneous Lesions :

- Etiopathogenesis, clinical features & histopathology of the following common lesions. Lichen Planus, Lupus Erythematosus, Pemphigus & Pemphigoid lesions, Erythema Multiforme, Psoriasis, Scleroderma, Ectodermal Dysplasia, Epidermolysis bullosa & white sponge nevus.

Diseases of the Nerves :

- Facial neuralgias - Trigeminal & Glossopharyngeal. VII nerve paralysis,
- causalgia Psychogenic facial pain & Burning mouth syndrome

Pigmentation of Oral & Paraoral region & Discolouration of teeth :

- Causes & clinical manifestations

Disease of Maxillary Sinus :

- Traumatic injuries to sinus, Sinusitis, Cysts & Tumours involving antrum
- a) ORAL PRECANCER - CANCER ; Epidemiology, aetiology, clinical and histopathological features, TNM classification. Recent advances in diagnosis, management and prevention.
- b) Biopsy : Types of biopsy, value of biopsy, cytology, histo chemistry & frozen sections in diagnosis of oral disease.

Principles of Basic forensic Odontology (Pre-clinical Forensic Odontology):

- Introduction, definition, aims & scope.
- Sex and ethnic (racial) differences in tooth morphology and histological age estimation
- Determination of sex & blood groups from buccal mucosa / saliva.
- Dental DNA methods
- Bite marks, rugae patterns & lip prints. Dental
- importance of poisons and corrosives,
- Overview of forensic medicine and toxicology

RECOMMENDED BOOKS

1. A Text Book of Oral Pathology - shafer, Hine & Levy
2. Oral Pathology - Clinical Pathologic correlations - Regezi & Sciubba
3. Oral Pathology - Soames & southam
4. Oral Pathology in the Tropics - Prabhu, Wilson, Johnson & Daftary

GENERAL MEDICINE

GUIDELINES :

Special emphasis should be given throughout on the importance of various disease as applicable to dentistry.

Special precautions / contraindication of anaesthesia and various dental procedures in different systemic diseases.

Oral manifestations of systemic diseases.

Medical emergencies in dental practice.

A dental student should be taught in such a manner he / she is able to record the arterial pulse, blood pressure and be capable of suspecting by sight and superficial examination of the body - disease of the heart, lungs, kidneys, blood etc. He should be capable of handling medical emergencies encountered in dental practice.

THEORY SYLLABUS

CORE TOPICS (Must Know)	COLLATERAL TOPICS (Desirable to know)
1. Aims of medicine Definition of signs, symptoms, diagnosis, differential diagnosis treatment & prognosis	
<u>2. Infections</u> Enteric fever, AIDS, herpes simplex, herpes zoster, syphilis diphtheria	Infectious mononucleosis mumps, measles, rubella, malaria.
<u>3. G.I.T.</u> Stomatitis, gingival hyperplasia, dysphagia, acid peptic disease, jaundice, acute and chronic hepatitis, cirrhosis of liver ascites.	Diarrhea Dysentery Amoebiasis Malabsorption
<u>4. CVS</u> Acute rheumatic fever rheumatic valvular heart disease, hypertension, ischemic heart disease, infective endocarditis, common arrhythmias, congenital heart disease, congestive cardiac failure.	
<u>5. RS</u> Pneumonia, COPD, Pulmonary TB, Bronchial Asthma	Lung Abscess Pleural effusion Pneumothorax Bronchiectasis Lung cancers
<u>6. Hematology</u> Anemias, bleeding & clotting, disorders, leukemias lymphomas, agranulocytosis, splenomegaly, oral manifestations of hematologic disorders,	

generalized. Lymphadenopathy	
<u>7. Renal system</u> Acute nephritis Nephrotic syndrome	Renal failure
<u>8. Nutrition</u> Avitaminosis	Balanced diet PEM Avitaminosis
<u>9. CNS</u> Facial palsy, facial pain including trigeminal neuralgia, epilepsy, headache including migraine.	- Meningitis - Examination of comatose patient - Examination of cranial nerves
<u>10. Endocrines</u> Diabetes Mellitus Acromegaly, Hypothyroidism, Thyrotoxicosis, Calcium metabolism and parathyroids.	Addison s disease, Cushing s syndrome
<u>11. Critical care</u> Syncope, cardiac arrest, CPR, Shock	Ac LVF ARDS

CLINICAL TRAINING :

The student must be able to take history, do general physical examination (including build, nourishment, pulse, BP, respiration, clubbing, cyanosis, jaundice, lymphadenopathy, oral cavity) and be able to examine CVS, RS and abdomen and facial nerve.

10. GENERAL SURGERY

AIMS :

To acquaint the student with various diseases, which may require surgical expertise and to train the student to analyze the history and be able to do a through physical examination of the patient. The diseases as related to head and neck region are to be given due importance, at the same time other relevant surgical problems are also to be addressed. At the end of one year of study the student should have a good theoretical knowledge of various ailments, and be practically trained to differentiate benign and malignant diseases and be able to decided which patient requires further evaluation.

HISTORY OF SURGERY

The development of surgery as a speciality over the years, will give the students an opportunity to know the contributions made by various scientists, teachers and investigators. It will also enable the student to understand the relations of various specialities in the practice of modern surgery.

GENERAL PRINCIPLES OF SURGERY

Introduction to various aspects of surgical principles as related to orodental diseases.
Classification of diseases in general. This will help the student to understand the various diseases, their relevance to routine dental practice.

WOUND

Their classification, wound healing, repair, treatment of wounds, medico-legal aspects of accidental wounds and complications of wounds.

INFLAMMATION

Of soft and hard tissues. Causes of inflammation, varieties, treatment and sequelae.

INFECTIONS :

Acute and chronic abscess skin infections, cellulites, carbuncle and erysipelas. Specific infections such as tetanus, gangrene, syphilis, gonorrhoea, tuberculosis, Actinomycosis, Vincents angina, cancrum oris, Pyaemia, toxaemia and septicaemia.

TRANSMISSABLE VIRAL INFECTIONS :

HIV and Hepatitis B with special reference to their prevention and precautions to be taken in treating patients in a carrier state.

SHOCK AND HAEMORRHAGE :

Classification, causes, clinical features and management of various types of shock. Syncope, Circulatory collapse. Haemorrhage - different types, causes, clinical features and management. Blood groups, blood transfusion, precautions and complications of blood and their products. Hemophilias, their transmission, clinical features and management especially in relation to minor dental procedures.

TUMOURS, ULCERS, CYSTS, SINUS AND FISTULAE :

Classification, clinical examination and treatment principles in various types of benign and malignant tumours, ulcers, cysts, sinus and fistulae.

DISEASES OF LYMPHATIC SYSTEM:

Especially those occurring in head and neck region. Special emphasis on identifying diseases such as tubercular infection, lymphomas, leukaemias, metastatic lymph node diseases.

DISEASES OF THE ORAL CAVITY

Infective and malignant diseases of the oral cavity and oropharynx including salivary glands with special emphasis on preventive aspects of premalignant and malignant diseases of the oral cavity.

DISEASES OF LARYNX, NASOPHARYNX:

Infections and tumours affecting these sites. Indications, procedure and complications of tracheostomy.

NERVOUS SYSTEM :

Surgical problems associated with nervous system with special reference to the principles of peripheral nerve injuries, their regeneration and principles of treatment.

Detailed description of afflictions of facial nerve and its management. Trigeminal neuralgia, its presentation and treatment.

FRACTURES :

General principles of fractures, clinical presentation and treatment with additional reference to newer methods of fracture treatment. Special emphasis on fracture healing and rehabilitation.

PRINCIPLES OF OPERATIVE SURGERY:

Principles as applicable to minor surgical procedures including detailed description of asepsis, antiseptics, sterilization, principles of anesthesia and principles of tissue replacement. Knowledge of sutures, drains, diathermy, cryosurgery and use of Laser in surgery.

ANOMOLIES OF DEVELOPMENT OF FACE :

Surgical anatomy and development of face. Cleft lip and cleft palate - principles of management.

DISEASES OF THYROID AND PARATHYROID :

Surgical anatomy, pathogenesis, clinical features and management of dysfunction of thyroid and parathyroid glands. Malignant diseases of the thyroid - classification, clinical features and management.

SWELLING OF THE JAW :

Differential diagnosis and management of different types of swellings of the jaw.

BIOPSY :

Different types of biopsies routinely used in surgical practice.

Skills to be developed by the end of teaching is to examine a routine swelling, ulcer and other related diseases and to perform minor surgical procedures such as draining an abscess, taking a biopsy etc.

11. CONSERVATIVE DENTISTRY AND ENDODONTICS :

OBJECTIVES :

Knowledge and understanding

Skills and

Attitudes

A. Knowledge and understanding :

The graduate should acquire the following knowledge during the period of training.

To diagnose and treat simple restorative work for teeth.

To gain knowledge about aesthetic restorative material and to translate the same to patients needs.

To gain the knowledge about endodontic treatment on the basis of scientific foundations.

To carry out simple endodontic treatment.

To carry out simple luxation of tooth and its treatment and to provide emergency endodontic treatment.

SKILLS :

He should attain following skills necessary for practice of dentistry.

To use medium and high speed hand pieces to carry out restorative work.

Poses the skills to use and familiarize endodontics instruments and materials needed for carrying out simple endodontic treatment.

To achieve the skills to translate patients esthetic needs along with function.

ATTITUDES :

Maintain a high standard of professional ethics and conduct and apply these in all aspects of professional life.

Willingness to participate in CDE programme to update the knowledge and professional skill from time to time.

To help and participate in the implementation of the national oral health policy.

He should be able to motivate the patient for proper dental treatment at the same time proper maintenance of oral hygiene should be emphasise which will help to maintain the restorative work and prevent future damage.

INTRODUCTION :

Definition aims objectives of Conservative Dentistry scope and future of Conservative Dentistry.

Nomenclature of Dentition :

Tooth numbering systems A.D.A. Zsigmondy palmer and F.D.I. systems.

Principles of Cavity Preparation :

Steps and nomenclature of cavity preparation classification of cavities, nomenclature of floors angles of cavities.

Dental caries :

Aetiology classification clinical features, morphological features, microscopic features, clinical diagnosis and sequel of dental caries.

Treatment Planning For Operative Dentistry :

Detailed clinical examination, radiographic examination. tooth vitality tests, diagnosis and treatment planning, preparation of the case sheet.

Gnathological Concepts of Restoration.

Physiology of occlusion, normal occlusion, Ideal occlusion, mandibular movements and occlusal analysis. Occlusal rehabilitation and restoration.

Aramamentarium For Cavity Preparation :

General classification of operative instruments, Hand cutting instruments design formula and sharpening of instruments. Rotary cutting instruments dental bur, mechanism of cutting, evaluation of hand piece and speed current concepts of rotary cutting procedures. Sterilization and maintenance of instruments. Basic instrument tray set up.

Control of Operating Field

Light source sterilization field of operation control of moisture, rubber dam in detail, cotton rolls and anti sialogagues.

Amalgam Restoration :

Indication contraindication, physical and mechanical properties, clinical behaviour, cavity preparation for Class I, II, V and III. Step wise procedure for cavity preparation and restoration. Failure of amalgam restoration.

Pulp protection :

Liners, varnishes and bases, Zinc phosphate, zinc polycarboxylate, zinc oxide eugenol and glass inomer cements.

Anterior Restorations :

Selection of cases, selection of material, step wise procedures for using restorations, silicate (theory only) glass inomers, composites, including sand witch restorations and bevels of the same with a note on status of the dentine bonding agents.

Direct filling Gold restoration :

Types of direct filling gold indications and limitations of cohesive gold. Annealing of gold foil cavity preparation and condensation of gold foils.

Preventive Measures In Restorative Practice :

Plaque Control, Pitand fissure sealants dietary measures restorative procedure and periodontal health. Contact and contour of teeth and restorations matrices tooth separation and wedges.

Temporisation or Interim Restoration.

Pin Amalgam Restoration Indication Contra Indication :

Advantages disadvantages of each types of pin methods of placement use of auto matrix. Failure of pin amalgam restoration.

Management of Deep Carious Lesions Indirect And Direct Pulp Capping.

Non carious destructions Tooth Structures Diagnosis and Clinical Management.

Hyper Sensitive Dentine And Its Management.

Cast Restorations

Indications, contra indications, advantages and disadvantages and materials used for same class II and class I cavity preparation for inlays fabrication of wax pattern spurring inverting and casting procedures and casting defects.

Die Materials And Preparation of Dies

Gingival Tissue Management For Cast Restoration And Impression Procedures.

Recent Cavity Modification Amalgam Restoration.

Differences between amalgam and Inlay Cavity preparation with note on all the types of Bewels used for Cast Restoration.

Control of Pain During Operative Procedures.

Treatment Planning for Operative Dentistry Detailed Clinical Examination Radiographic Examination.

Vitality Tests, Diagnosis And Treatment Planning And Preparation Of Case Sheet.

Applied Dental Materials :

Biological Considerations.

Evaluation, clinical application and adverse effects of the following materials. Dental cements, Zinc oxide eugenol cements zinc phosphate cements, polycarboxylates glass ionomer cements, silicate cement calcium hydroxides varnishes.

Dental amalgam, technical considerations mercury toxicity mercury hygiene.

Composite, Dentine bonding agents, chemical and light curing composites.

Rubber base Imp. Materials.

Nobel metal alloys & non noble metal alloys.

Investment and die materials

Inlay casting waxes.

Dental porcelain

Aesthetic Dentistry

Endodontics : introduction definition scope and future of endodontics.

Clinical Diagnostic methods

Emergency endodontics procedures

Pulpal diseases causes, types and treatment.

Periapical diseases: acute periapical abscess, acute periodontal abscess, parodontal abscess, chronic alveolar abscess, granuloma, cysts, condensing osteitis, external resorption.

Vital pulp therapy : indirect and direct pulp capping, pulpotomy, different types and medicaments used.

Apexogenesis and apexification or problems of open apex.

Rationale of endodontic treatment case selection, indication and contraindications for root canal treatments.

Principles of root canal treatment, mouth preparation, root canal instruments, hand instruments, power driven instruments, standardization, color coding, principle of using endodontic instruments. Sterilisation of root canal instruments and materials, rubber dam application.

Anatomy of the pulp cavity : root canals, apical foramen. Anomalies of pulp cavities, access cavity preparation of anterior and premolar teeth.

Preparation of root canal space. Determination of working length, cleaning and shaping of root canals, irrigating solution, chemical aids to instrumentation.

Disinfection of root canal space, intracanal medicaments, poly antibiotic paste, root canal sealer, mummifying agents. Outline of root canal treatment, bacteriological examinations, culture methods.

Problems during cleaning and shaping of root canal spaces. Perforation and its management. Broken instruments and its management, management of single and double curved root canals.

Methods of cleaning and shaping like step back, crown down and conventional methods.

Obturation of the root canal system. Requirements of an ideal root canal filling material, obturation methods using gutta-percha, healing after endodontic treatment. Failures in endodontics.

Root canal sealers. Ideal properties, classification. Manipulation of root canal sealers.

Post endodontic restoration, fabrication and components of post core preparation.

Smear layer and its importance in endodontics and conservative treatment.

Discoloured teeth and its management. Bleaching agents, vital and non vital bleaching methods.

Traumatized teeth, classification of fractured teeth. Management of fractured tooth and root.

Luxated teeth and its management.

Endodontic surgeries, indication, contraindications, pre operative preparation. Pre medication, surgical instruments and techniques, apicectomy, retrograde filling, post

operative sequelae trephination hemisection, radiscetomy techniques of tooth reimplantation (both intentional and accidental) endodontic implants.
root resorption.
emergency endodontic procedures.
lasers in conservative endodontics (introduction only) practice management.
professional association dentist act 1948 and its amendment 1993.
duties towards the govt. Like payments of professional tax, income tax.
financial management of practice.
dental material and basic equipment management.
Ethics.

ORAL & MAXILLOFACIAL SURGERY

AIMS :

To produce a graduate who is competent in performing extraction of teeth under both local and general anaesthesia, prevent and manage related complications, acquire a reasonable knowledge and understanding of the various diseases, injuries, infections occurring in the Oral & Maxillofacial region and offer solutions to such of those common conditions and has an exposure in to the in patient management of maxillofacial problems.

OBJECTIVES :

a) Knowledge & Understanding :

At the end of the course and the clinical training the graduate is expected to -

Able to apply the knowledge gained in the related medical subjects like pathology, microbiology and general medicine in the management of patients with oral surgical problem.

Able to diagnose, manage and treat (understand the principles of treatment of) patients with oral surgical problems.

Knowledge of range of surgical treatments.

Ability to decide the requirement of a patient to have oral surgical specialist opinion or treatment.

Understand the principles of in patient management.

Understanding of the management of major oral surgical procedures and principles involved in patient management.

Should know ethical issues and communication ability.

Skills :

A graduate should have acquired the skill to examine any patient with an oral surgical problem in an orderly manner. Be able to understand requisition of various clinical and laboratory investigations and is capable of formulating differential diagnosis.

Should be competent in the extraction of teeth under both local and general anesthesia.

Should be able to carry out certain minor oral surgical procedures under L.A. like frenectomy, alveolar procedures and biopsy etc.

Ability to assess, prevent and manage various complications during and after surgery.

Able to provide primary care and manage medical emergencies in the dental office.

Understanding of the management of major oral surgical problems and principles involved in inpatient management.

DETAILED SYLLABUS

Introduction, definition, scope, aims and objectives.

Diagnosis in oral surgery :

History taking

Clinical examination

Investigations

Principles of infection control and cross-infection control with particular reference to HIV / AIDS and Hepatitis.

Principles of Oral Surgery -

Asepsis: Definition, measures to prevent introduction of infection during surgery.

Preparation of the patient

Measures to be taken by operator

Sterilization of instruments - various methods of sterilization etc.

Surgery set up.

Painless Surgery:

Pre-anaesthetic considerations. Pre-medication: Purpose, drugs used

Anaesthetic considerations -

a) Local b) Local with IV sedations

Use of general anaesthetic

Access:

Intra-oral: Mucoperiosteal flaps, principles, commonly used intra oral incisions.

Bone removal : Methods of bone removal

Use of Burs : Advantages & precautions

Bone cutting instruments : Principles of using chisel & osteotome.

Extra - oral : Skin incisions - principles, various extra oral incision to expose facial skeleton.

Submandibular

pre auricular

Incision to expose maxilla & orbit

Bicoronal incision

Control of haemorrhage during surgery

Normal Haemostasis

Local measures available to control bleeding Hypotensive anaesthesia etc.

Drainage & Debridement

Purpose of drainage in surgical wounds Types of drains used

Debridement : Purpose, soft tissue & bone debridement

Closure of wounds

Suturing : Principles, suture material, classification, body response to various materials etc.

post operative care

Post operative instructions

Physiology of cold and heat

Control of pain - analgesics

Control of infection - antibiotics

Control of swelling - anti-inflammatory drugs

Long term post operative follow up - significance.

Exodontia : General considerations

Ideal Extraction.

Indications for extraction of teeth

Extractions in medically compromised patients. Methods of extraction -

Forceps or intra-alveolar or closed method

Principles, types of movement, force etc.

Trans-alveolar, Surgical or open method, indications, surgical procedure

Dental elevators : uses, classification, principles in the use of elevators, commonly used elevators.

Complications of Exodontia -
Complications during Exodontia
Common to both maxilla and mandible.
Post-operative complications
Prevention and management of

complications 6. Impacted teeth:

Incidence, definition, aetiology.

Impacted mandibular third molar.

Classification, reasons for removal,

Assessment - both clinical & radiological

Surgical procedures for removal

Complications during and after removal

Prevention and management

Maxillary third molar,

Indications for removal, classification,

surgical procedure for removal

Impacted maxillary canine

Reasons for canine impaction

Localisation, Indications for removal

Methods of management, labial and palatal approach,

Surgical exposure, transplantation, removal etc.

Pre- prosthetic surgery

Definition, classification of procedures

Corrective procedures : Alveoloplasty

Reduction of maxillary tuberosities,

Frenectomies and removal of tori

Ridge extension or Sulcus extension procedures

Indications and various surgical procedures

Ridge augmentation and reconstruction

Indications, use of bone grafts, Hydroxyapatite

Implants - concept of osseointegration

Knowledge of various types of implants

and surgical procedure to place implants

8. Disease of the maxillary sinus

Surgical anatomy of the sinus

Sinusitis both acute and chronic

Surgical approach of sinus - Caldwell - Luc

procedure Removal of root from the sinus

Oro-antral fistula - aetiology, clinical features and various surgical methods for closure

9. Disorders of T.M. joint

Applied surgical anatomy of the joint

Dislocation - types, aetiology, clinical features and management

ankylosis - Definition, aetiology, clinical features and management

Myo-facial pain dysfunction syndrome, aetiology, clinical features management Non surgical and surgical

Internal derangement of the joint

Arthritis of T.M. Joint 10.

Infections of the oral cavity

Introduction, factors responsible for infection, course of odontogenic

Infections, spread of odontogenic infections through various facial spaces

Dento - alveolar abscess - aetiology, clinical features and management

Osteomyelitis of the jaws - definition, aetiology, pre-disposing factors

Classification, clinical features and management

Ludwigs angina - definition, aetiology, clinical features, management and complications

Benign cystic lesions of the jaws Definition

- classification, pathogenesis

Diagnosis, Clinical features, radiological, aspiration biopsy, use of contrast media and histopathology

Management - Types of surgical procedure, rationale of the techniques indications, procedures, complications etc.

Tumours of the Oral cavity

General considerations

Non odontogenic benign tumours occurring in oral cavity - fibroma, papilloma, lipoma, ossifying fibroma myxoma etc.

Ameloblastoma - clinical features, radiological appearance and methods of management

Carcinoma of the oral cavity

Biopsy - types

TNM classification

outline of management of squamous

Cell carcinoma : Surgery, radiation and chemotherapy

Role of dental surgeons in the prevention and early detection of oral

cancer 13. Fractures of the jaws -

General considerations, types of fractures, aetiology, clinical features and general principles of management

Mandibular fractures - Applied anatomy,

classification Diagnosis - clinical and radiological

Management - Reduction closed and open

Fixation and immobilization methods

Outline of rigid and semi-rigid internal fixation

Fractures of the condyle - aetiology, classification, clinical features, principles of management

Fractures of the middle third of the face

Definition of the mid face, applied surgical anatomy, classification, clinical features and outline of management

Alveolar fracture - methods of management

Fractures of the Zygomatic complex

Classification, clinical features, indications for treatment, various methods of reduction and fixation

Complications of fractures - delayed union, non-union and

malunion 14. Salivary gland diseases -

Diagnosis of salivary gland diseases.

Sialography, contrast media, procedure.

Infections of the salivary glands

Sialolithiasis - sub mandibular duct and gland and parotid duct. Clinical features, management

Salivary fistulae

Common tumours of salivary glands like Pleomorphic adenoma including minor salivary glands

15. Jaw deformities -

Basic forms - Prognathism, Retrognathism and open bite

Reasons for correction.

Outline of surgical methods carried out on mandible and

maxilla 16. Neurological disorders -

Trigeminal neuralgia - definition, aetiology, clinical features and methods of management including surgical

Facial paralysis - Aetiology, clinical features.

Nerve injuries - Classification, neurohaphy etc.

17. Cleft Lip and Palate -

Aetiology of the clefts, incidence, classification, role of dental surgeon in the management of cleft patients, Outline of the closure procedures.

18. Medical Emergencies in dental practice -

Primary care of medical emergencies in dental practice particularly -

- | | | |
|---------------------------|-----------------|---------------|
| (a) Cardio vascular | (b) Respiratory | (c) Endocrine |

19. Emergency drugs & Intra muscular I.V. Injections -

Applied anatomy, Ideal Location for giving these injection, techniques etc.

Oral Implantology

Ethics

LOCAL ANAESTHESIA :

Introduction, concept of L.A., classification of local anaesthetic agents, ideal requirements, mode of action, types of local anaesthesia, complications.

Use of Vaso constrictors in local anaesthetic solution -

Advantages, contra-indications, various vaso constrictors used.

Anaesthesia of the mandible -

Pterygomandibular space - boundaries, contents

etc. Inferior Dental Nerve Block - various techniques

Complications

Mental foramen nerve block

Anaesthesia of Maxilla-Intra

- Orbital nerve block

Anaesthesia of Maxilla -

Intra - orbital nerve block.

Posterior superior alveolar nerve block

Maxillary nerve block - techniques.

GENERAL ANAESTHESIA -

Concept of general anaesthesia

Indications of general anaesthesia in dentistry

Pre-anaesthetic evaluation of the patient
Pre-anaesthetic medication - advantages, drugs used
Commonly used anaesthetic agents
Complication during and after G.A.
I.V. sedation with Diazepam and Medazolam
Indications, mode of action, technique etc.
Cardiopulmonary resuscitation
Use of oxygen and emergency drugs.
Tracheostomy.

RECOMMENDED BOOKS :

Impacted teeth : Alling John F & etal
Principles of oral and maxillofacial surgery ; Vol.1,2 & 3 peterson LJ & etal
Text book of oral and maxillofacial surgery ; Srinivasan B.
Handbook of medical emergencies in the dental office, Malamed SF.
Killeys Fractures of the mandible ; Banks P.
Killeys fractures of the middle 3rd of the facial skeleton; Banks P.
The maxillary sinus and its dental implications ; McGovanda
Killey and kays outline of oral surgery - part -1 ; Seward GR & etal
Essentials of safe dentistry for the medically compromised patients; Mc Carthy FM
Oral & maxillofacial surgery, Vol 2; Laskin DM
Extraction of teeth; Howe, GL
Minor Oral Surgery ; Howe. GL
Contemporary oral and maxillofacial surgery; Peterson I.J. &EA
Oral and maxillofacial infections ; Topazian RG & Goldberg MH

ORAL MEDICINE AND RADIOLOGY

AIMS :

To train the students to diagnose the common disorders of Orofacial region by clinical examination and with the help of such investigations as may be required and medical management of oro-facial disorders with drugs and physical agents.

To train the students about the importance, role, use and techniques radiographs / digital radiograph and other imaging methods in diagnosis.

The principles of the clinical and radiographic aspects of Forensic Odontology.

The syllabus in ORAL MEDICINE & RADIOLOGY is divided into two main parts

(I) Diagnosis, Diagnostic methods and Oral Medicine (II) Oral Radiology, Again the part One is subdivided into three sections. (A) Diagnostic methods (B) Diagnosis and differential diagnosis (C) Oral Medicine & Therapeutics.

COURSE CONTENT

Emphasis should be laid on oral manifestations of systemic diseases and ill-effects oral sepsis on general health.

To avoid confusion regarding which lesion and to what extent the student should learn and know, this elaborate syllabus is prepared. As certain lesions come under more than one group, there is repetition.

Part - I ORAL MEDICINE AND DIAGNOSTIC AIDS

SECTION (A) - DIAGNOSTIC METHODS

Definition and importance of Diagnosis and various types of diagnosis.

Method of clinical examinations.

General Physical examination by inspection.

Oro-facial region by inspection, palpation and other means.

To train the students about the importance, role, use of saliva and techniques diagnosis of saliva as part of oral disease

Examination of lesions like swellings, ulcers, erosions, sinus, fistula, growth pigmented lesions, white and red patches.

Examination of lymph nodes

Forensic examination - Procedures for post-mortem dental examination; maintaining dental records and their use in dental practice and post-mortem identification; jurisprudence and ethics.

Investigations

Biopsy and exfoliative cytology

Hematological, Microbiological and other tests and investigations necessary for diagnosis and prognosis.

SECTION (B) - DIAGNOSIS, DIFFERENTIAL DIGNOSIS

While learning the following chapters, emphasis shall be given only on diagnostic aspects including differential diagnosis

Teeth : Developmental abnormalities, causes of destruction of teeth and their sequelae and discoloration of teeth

Diseases of bone and Osteodystrophies : Development disorders: Anomalies, Exostosis and tori, infantile cortical hyperostosis, osteogenesis imperfecta. Marfans syndrome,

osteopetrosis. Inflammation - Injury, infection and spread of infection fascial space infections osteoradionecrosis.

metabolic disorders - Histiocytosis

Endocrine - Acro - megaly and hyperparathyroidism

Miscellaneous - Paget's disease, Mono and polyostotic fibrous dysplasia, Cherubism.

Temporomandibular joint : Developmental abnormalities of the condyle. Rheumatoid arthritis, Osteoarthritis, Sub-luxation and luxation.

Common cysts and Tumours:

CYSTS: Cysts of soft tissue : Mucocele and Ranula

Cysts of bone : Odontogenic and nonodontogenic

TUMORS :

Soft Tissue:

Epithelial: Papilloma, Carcinoma, Melanoma

Connective tissue : Fibroma, Lipoma, Fibrosarcoma

Vascular : Haemangioma, Lymphangioma

Nerve Tissue : Neurofibroma, Traumatic Neuroma, Neurofibromatosis

Salivary Glands ; Pleomorphic adenoma, Adenocarcinoma, Warthin's Tumour, Adenoid Cystic carcinoma.

Hard Tissue :

Non Odontogenic : Osteoma, Osteosarcoma, Osteoclastoma, Chondroma,

Chondrosarcoma, Central giant cell tumor, and Central haemangioma

Odontogenic : Enameloma, Ameloblastoma, Calcifying Epithelial Odontogenic tumor,

Adenomatoid Odontogenic tumor, Periapical cemental dysplasia and odontomas

Periodontal diseases: Gingival hyperplasia, gingivitis, periodontitis, pyogenic granuloma

Granulomatous diseases : Tuberculosis, Sarcoidosis, Midline lethal granuloma Crohn's Disease and Histiocytosis X

Miscellaneous Disorders : Burkitt lymphoma, Sturge - Weber syndrome, CREST syndrome, Rendu-Osler-Weber disease.

SECTION (C) : ORAL MEDICINE AND THERAPEUTICS.

The following chapters shall be studied in detail including the etiology, pathogenesis, clinical features, investigations, differential diagnosis, management and prevention.

Infections of oral and paraoral structures:

Bacterial : Streptococcal, tuberculosis, syphilis, Vincent's, leprosy, actinomycosis, diphtheria and tetanus

Fungal : Candida albicans

Virus : Herpes simplex, herpes zoster, ramsay hunt syndrome measles, herpangina mumps, infectious mononucleosis, AIDS and hepatitis B

Important common mucosal lesions :

White lesions : Chemical burns, leukodema, leukoplakia, Fordyce spots, stomatitis nicotina palatinus, white sponge nevus, candidiasis, licherplanus, discoid lupus erythematosis

Veiculo-bullous lesions : Herpes simplex herpes zoster herpangina, bullous lichen planus, pemphigus, cicatricial pemphigoid erythema multiforme.

Ulcers : Acute and chronic ulcers

Pigmented lesions : Exogenous and endogenous

Red lesions : Eruthroplakia, Stomatitis venenata and medicamentosa, erosive, lesions and denture sore mouth Cervico-facial lymphadenopathy

Facial Pain :

(i) Organic pain : pain arising from the diseases of orofacial tissues like teeth, pulp, gingival, periodontal tissue, mucosa, tongue, muscles, blood vessels, lymph tissue, bone, paranasal sinus, salivary glands etc.

(ii) Pain arising due to C.N.S. diseases:

Pain due to intracranial and extracranial involvement of cranial nerves (Multiple sclerosis, cerebrovascular disease trojter:s syndrome etc.)

Neuralgic pain due to unknown causes : Trigeminal neuralgia, glossopharyngeal neuralgia, sphenopalatine ganglion neuralgia, periodic migrainous neuralgia and atypical facial pain.

Referred pain : Pain arising from distant tissues like heart, spine etc.,

Altered sensations : Cacogeusia halitosis.

Tongue in local and systemic disorders : (Aglossia, ankyloglossia, bifid tongue, fissured tongue, scrotal tongue, macroglossia, microglossia, geographic tongue, median rhomboid glossitis, depapillation of tongue, hairy tongue, atrophic tongue, reactive lymphoid hyperplasia, glossodynia, glossopyrosis, ulcers, white and red patches etc.)

Oral manifestations of :

Metabolic disorders :

Porphyria

Haemochromatosis

Histocytosis X diseases

Endocrine disorders:

Pituitary : Gigantism, acromegaly, hypopituitarism

Adrenal cortex : Addison's disease (Hypofunction)

Cushing's syndrome (Hyperfunction)

Parathyroid glands : Hyperparathyroidism.

Thyroid gland : (Hypothyroidism) Cretinism, myxedema

Pancreas : diabetes

Nutritional deficiency : vitamins : riboflavin, nicotinic acid, folic acid vitamin B12,
vitamin C (Scurvy)

Blood disorders :

Red blood cell diseases

Deficiency anemias : (Iron deficiency, Plummer - Vinson syndrome, pernicious anemia)

Haemolytic anemias : (Thalassemia, sickle cell anemia, erythroblastosis fetalis)

Aplastic anemia

Polycythemia

White blood cell diseases

Neutropenia, cyclic neutropenia, agranulocytosis, infectious mononucleosis and leukemias

Haemorrhagic disorders :

Thrombocytopenia, purpura, hemophilia, Christmas disease and von Willebrand's disease

Disease of salivary glands :

Development disturbances : Aplasia, atresia and aberration

Functional disturbances : Xerostomia, ptyalism

Inflammatory conditions : Nonspecific sialadenitis, mumps, sarcoidosis Heerfort's syndrome (Uveoparotid fever), Necrotising sialometaplasia

Cysts and tumors : Mucocele, ranula, pleomorphic adenoma, mucoepidermoid carcinoma

Miscellaneous : sialolithiasis, Sjögren's syndrome, Mikulicz's disease and sialosis

Dermatological diseases with oral manifestations :

Ectodermal dysplasia (b) Hyperkeratosis palmarplantaris with periodontopathy (c) Scleroderma (d) Lichen planus including gingivitis syndrome (e) Lupus erythematosus (f) Pemphigus (g) Erythema multiforme (h) Psoriasis

Immunological diseases with oral manifestations

Leukemia (b) Lymphomas (c) Multiple myeloma (d) AIDS clinical manifestations, opportunistic infections, neoplasms (e) Thrombocytopenia (f) Lupus erythematosus (g) Scleroderma (h) dermatomyositis (I) Submucous fibrosis (j) Rheumatoid arthritis (k) Recurrent oral ulcerations including Behçet's syndrome and Reiter's syndrome

Allergy : Local allergic reactions anaphylaxis, serum sickness (local and systemic allergic manifestations to food drugs and chemicals)

Foci of oral infection and their ill effects on general health

Management of dental problems in medically compromised persons :

Physiological changes : Puberty, Pregnancy and menopause

The patients suffering with cardiac, respiratory, liver, kidney and bleeding disorders, hypertension, diabetes and AIDS. Post-irradiated patients.

Precancerous lesions and conditions

Nerve and muscle diseases :

Nerves : (a) Neuropraxia (b) Neurotmesis (c) Neuritis (d) Facial nerve paralysis including Bell's palsy, Heerfordt's syndrome, Melkersson Rosenthal syndrome and Ramsay Hunt syndrome (e) Neuroma (f) Neurofibromatosis (g) Frey's syndrome

Muscles : (a) Myositis ossificans (b) Myofascial pain dysfunction syndrome (c) Trismus

Forensic Odontology:

Medicolegal aspects of orofacial injuries

Identification of bite marks

Determination of age and sex

Identification of cadavers by dental appliances, Restorations and tissue remnants viz., antibiotics, chemotherapeutic agents, anti-inflammatory and analgesic drugs, astringents, mouth washes, styptics, demulcents, local surface anaesthetic, sialogogues, antisialogogues and drugs used in the treatment of malignancy.

Part - II BEHAVIOURAL SCIENCES AND ETHICS.

Part - III ORAL RADIOLOGY

Scope of the subject and history of origin

Physics of radiation : (a) Nature and types of radiations (b) source of radiations (c)

Production of X-rays (d) Properties of X-rays (e) Compton effect (f) Photoelectric effect

Radiation measuring units

Biological effects of radiation

Radiation safety and protection measures

Principles of image production

Radiographic techniques:

Intra-Oral : (a) Periapical radiographs (Bisecting and parallel techniques) (b) Bite wing radiographs (c) Occlusal radiographs

Extra - Oral : (a) Lateral projections of skull and jaw bones and paranasal sinuses Cephalograms (d) Orthopantomograph (e) Projections of temporomandibular joint and condyle of mandible (f) Projections for Zygomatic arches

Specialised techniques : (a) Sialography (b) Xeroradiography (c) Tomography

Factors in production of good radiographs :

K.V.P. and MA of X-ray machine (b) Filters (c) Collimations (d) Intensifying screens (e) Grids (f) X-ray films (g) Exposure time (h) Techniques (i) Dark room (j) Developer and fixer solutions (k) Film processing

Radiographic normal anatomical landmarks

Facility radiographs and artefacts in radiographs

Interpretation of radiographs in various abnormalities of teeth, bones and other orofacial tissues

Principles of radiotherapy of oro-facial malignancies and complications of radiotherapy

Contrast radiography and basic knowledge of radio-active isotopes

Radiography in Forensic Odontology - Radiographic age estimation and post-mortem radiographic methods.

PRACTICALS / CLINICALS

Student is trained to arrive at proper diagnosis by following a scientific and systematic procedure of history taking and examination of the orofacial region. Training is also imparted in management wherever possible. Training also shall be imparted on saliva diagnostic procedures. Training also shall be imparted in various radiographic procedures and interpretation of radiographs.

In view of the above each student shall maintain a record of work done, which shall be evaluated for marks at the time of University examination.

The following is the minimum of prescribed work for recording

- (a) Recording of detailed case histories of interesting cases10
- (b) Intra-oral radiographs (Periapical, bitewing, occlusal)25
- (c) Saliva diagnostic check as routine procedure.

BOOKS RECOMMENDED:

a) Oral Diagnosis, Oral Medicine & Oral Pathology

Burkit - Oral Medicine _ J.B. Lippincott Company

Coleman - Principles of Oral Diagnosis - Mosby Year Book

Jones - Oral Manifestations of Systemic Diseases - W.B. Saunders Company

Mitchell - Oral Diagnosis & Oral Medicine

Kerr - Oral Diagnosis

Miller - Oral Diagnosis & Treatment

Hutchinson - Clinical Methods

Oral Pathology - Shafers

Sonis. S.T., Fazio. R.C. and Fang. L. - Principles and practice of Oral Medicine

b) Oral Radiology

White & Goaz - Oral Radiology - Mosby year Book

Weahrman - Dental Radiology - C.V. Mosby Company

Stafne - Oral Roentgenographic Diagnosis - W. B. Saunders

Co., c) Forensic Odontology

Derek H. Clark - Practical Forensic Odontology - Butterworth - Heinemann (1992)

C. Michael Bowers, Gary Bell - Manual of forensic Odontology - Forensic Pr (1995)

ORTHODONTICS & DENTAL ORTHOPAEDICS

COURSE OBJECTIVE :

Undergraduate programme in orthodontics is designed to enable the qualifying dental surgeon to diagnose, analyse and treat common orthodontic problems by preventive, interceptive and corrective orthodontic procedures. The following basic instructional procedures will be adapted to achieve the above objectives.

Introduction, Definition, Historical Background, aims and Objectives of Orthodontics and

Need for Orthodontics care

Growth and Development : In General a.

Definition

Growth spurts and Differential growth

Factors influencing growth and Development

Methods of measuring growth

Growth theories (Genetic, Sichert's, Scott's, Moss's, Petrovics, Multifactorial)

Genetic and epigenetic factors in growth

Cephalocaudal gradient in growth

Morphologic Development of Craniofacial structures

Methods of bone growth

Prenatal growth of craniofacial structures

Postnatal growth and development of : cranial base, maxilla, mandible, dental arches and occlusion.

Functional Development of Dental Arches and Occlusion

Factors influencing functional development of dental arches and occlusion

Forces of Occlusion

Wolfs law of transformation of bone

Trajectories of forces

Clinical Application of Growth and development

Malocclusion - In General

Concept of normal occlusion

Definition of malocclusion

Description of different types of dental, skeletal and functional malocclusion.

Classification of Malocclusion

Principle, description, advantages and disadvantages of classification of malocclusion by Angles, Simon's, Lichers and Ackerman and Proffit's

Normal and Abnormal Function of Stomatognathic system

Etiology of Malocclusion

Definition, importance, classification, local and general etiological factors.

Etiology of following different types of malocclusion:

Midline diastema

Spacing

Crowding

Cross - Bite: Anterior / Posterior

Class III Malocclusion

Class II Malocclusion

7) Deep Bite

8) Open Bite

Diagnosis And Diagnostic Aids

- a. Definition, Importance and classification of diagnostic aids
- b. Importance of case history and clinical examination in orthodontics
- c. Study Models: - Importance and uses - Preparation and preservation of study models
- d. Importance of intraoral X-rays in orthodontics
- e. Panoramic radiographs:- Principles, Advantages, disadvantages and uses
- f. Cephalometrics: Its advantages, disadvantages
 1. Definition
 2. Description and use of cephalostat
 3. Description and uses of anatomical landmarks lines and angles used in cephalometric analysis
 4. Analysis - Steiners, Downs, Tweeds, Ricketts-E- line
- g. Electromyography and its uses in orthodontics
- h. Wrist X-rays and its importance in orthodontics

General Principles in Orthodontic Treatment Planning Of Dental And Skeletal Malocclusions

Anchorage In Orthodontics - Definition, Classification, Types and Stability Of Anchorage

Biomechanical Principles In Orthodontics Tooth movement a.

- Different types of tooth movements
- b. Tissue response to orthodontic force application
- c. Age factor in orthodontic tooth movement

Preventive Orthodontics a.

- Definition
- b. Different procedures undertaken in preventive orthodontics and their limitations.

Interceptive Orthodontics a.

- Definition
- b. Different procedures undertaken in interceptive orthodontics
- c. Serial extractions: Definition, indications, contra-indication, technique, advantages and disadvantages.
- d. Role of muscle exercises as an interceptive procedure

Corrective Orthodontics

- a. Definition, factors to be considered during treatment planning.
- b. Model analysis: Ponts, Ashley Howes, Bolton, Careys, Moyers Mixed Dentition Analysis

c. Methods of gaining space in the arch:- Indications, relative merits and demerits of proximal stripping, arch expansion and extractions

Extractions in Orthodontics - indications and selection of teeth for extraction.

Orthodontic Appliances: General

Requisites for orthodontics appliances

Classification, indications of Removable and Functional Appliances

Methods of force application

Materials used in construction of various orthodontic appliances - uses of stainless steel, technical considerations in curing of acrylic, Principles of welding and soldering, fluxes and antfluxes.

e. Preliminary knowledge of acid etching and direct bonding,

Ethics

REMOVABLE ORTHODONTIC APPLIANCES

Components of removable appliances

Different types of clasps and their uses

Different types of labial bows and their uses

Different types of springs and their uses

Expansion appliances in orthodontics:

Principles

Indications for arch expansion

Description of expansion appliances and different types of expansion devices and their uses.

Rapid maxillary expansion

FIXED ORTHODONTIC APPLIANCES

Definition, Indications & Contraindications

Component parts and their uses

Basic principles of different techniques: Edgewise, Beggs, straight wire.

EXTRAORAL APPLIANCES

Headgears

chin cup

reverse pull headgears

MYOFUNCTIONAL APPLIANCES

Definition and principles

Muscle exercise and their uses in orthodontics

Functional appliances:

Activator, Oral screens, Frankels function regulator, bionatar twin blocks, lip bumper

Inclined planes - upper and lower

Orthodontic Management of Cleft Lip And Palate

Principles of Surgical orthodontics

Brief Knowledge of correction of :

- a. Mandibular Prognathism and Retrognathism
- b. Maxillary Prognathism and Retrognathism c.

Anterior open bite and deep bite

- d. Cross bite

Principle, Differential diagnosis and methods of Treatment of : 1.

Midline diastema

2. Cross bite
3. Open bite
4. Deep bite
5. Spacing
6. Crowding
7. Class II -Division 1, Division 2
8. Class III Malocclusion - True and Psuedo Class III

Retention And Relapse

Definition, Need for retention, causes of relapse, Methods of retention, Different types of retention devices, Duration of retention, Theories of retention.

CLINICALS AND PRACTICALS IN ORTHODONTICS

PRACTICAL TRAINING DURING II YEAR B.D.S.

I. Basic wire bending exercises gauge 22 or 0.7 mm

Straightening of wires (4 Nos.)

Bending of a equilateral triangle

Bending of a rectangle

Bending of a square

Bending of a circle

Bending of U.V.

II. Construction of Clasps (Both sides upper / lower) Gauge 22 or 0.7 mm

$\frac{3}{4}$ clasp (C-clasp)

Full clasp (Jacksons Crib)

Adams Clasp

Triangular clasp

Construction of Springs (on upper both sides) Gauge 24 or 0.5mm

Finger Spring

Single Cantilever Spring

Double Cantilever Spring (Z-spring)

T-Springs on premolars

IV. Construction of Canine retractors Gauge 23 or 0.6mm

U-Loop Canine retractor

(Both sides on upper & lower)

Helical canine retractor

(Both sides on upper & lower)

3. Buccal canine retractor

-self supported buccal canine
retractor with

Sleeve - 5mm wire or 24 gauge

Sleeve - 19 gauge needle on any one side.

4. Palatal canine retractor on upper both
sides Gauge 23 or 0.6mm

Labial Bow

Gauge 22 or 0.7 mm

One on both upper and lower

CLINICAL TRAINING DURING III YEAR B.D.S.

NO. EXERCISE

Making upper Alignate impression

Making lower Alignate impression

Study model preparation

Model Analysis

Ponts analysis

Ashley Howes Analysis

Careys Analysis

Boltons Analysis

Moyers Mixed Dentition Analysis

CLINICAL TRAINING DURING FINAL YEAR B.D.S.

No. EXERCISE

Case History taking

Case discussion

Discussion on the given topic

Cephalometric tracings

Downs Analysis

Steiners Analysis

Tweeds Analysis

PRACTICAL TRAINING DURING FINAL YEAR B.D.S

Adams Clasp on Anterior teeth Gauge 0.7 mm

Modified Adams Clasp on upper arch Gauge 0.7 mm

High Labial bow with Apron spring on upper arch

(Gauge of Labial bow - 0.9 mm, Apron spring - 0.3 mm) 4. Coffin spring on upper arch Gauge 1 mm

Appliance construction in Acrylic

Upper and Lower Hawleys Appliance

Upper Hawleys with Anterior bite plane

Upper Habit breaking Appliance

Upper Hawleys with Posterior bite plane with .Z. Spring

Construction of Activator

Lower inclined plane / Catalan's Appliance

Upper Expansion plate with Expansion screw

RECOMMENDED AND REFERENCE BOOKS

| 7. CLINICAL ORTHODONTICS: VOL 1 & 2 | SALZMANN |

15. PAEDIATRIC & PREVENTIVE DENTISTRY

THEORY :

INTRODUCTION TO PEDODONTICS & PREVENTIVE DENTISTRY

Definition, Scope, Objectives and Importance.

GROWTH & DEVELOPMENT

Importance of study of growth and development in pedodontics

Prenatal and Postnatal factors in growth & development

Theories of growth & development

Development of maxilla and mandible and related age changes

DEVELOPMENT OF OCCLUSION FROM BIRTH THROUGH ADELOSCENCE

Study of variations and abnormalities

DENTAL ANATOMY AND HISTOLOGY

Development of teeth and associated structures.

Eruption and shedding of teeth

Teething disorders and their management

Chronology of eruption of teeth

Differences between deciduous and permanent teeth

Development of dentition from birth to adolescence.

Importance of first permanent molar.

DENTAL RADIOLOGY RELATED TO PEDODONTICS

ORAL SURGICAL PROCEDURES IN CHILDREN

Indication and contraindications of extractions of primary and permanent teeth in children

Knowledge of Local and General Anesthesia

Minor surgical procedures in children

DENTAL CARIES:

Historical background

Definition, aetiology and pathogenesis

Caries pattern in primary, young permanent and permanent teeth in children

Rampant caries, early childhood caries and extensive caries

Definition, aetiology, pathogenesis, Clinical features, Complications & Management

Role of diet and nutrition in Dental Caries

Dietary modifications and diet counseling

Caries activity, tests, caries prediction, caries susceptibility & their clinical application.

GINGIVAL & PERIODONTAL DISEASES IN CHILDREN

Normal gingiva & periodontium in children

Definition, aetiology and Pathogenesis

Prevention & Management of gingival & Periodontal diseases

CHILD PSYCHOLOGY

Definition

Theories of child psychology

Psychological development of children with age

Principles of psychological growth & development while managing child patient.

Dental fear and its management

Factors affecting child's reaction to dental treatment

BEHAVIOUR MANAGEMENT

Definitions.

Types of behaviour encountered in the dental clinic

Non - pharmacological & pharmacological methods of Behaviour Management.

PEDIATRIC OPERATIVE DENTISTRY:

Principles of Pediatric Operative Dentistry

Modifications required for cavity preparation in primary and young permanent teeth

Various Isolation Techniques

Restorations of decayed primary, young permanent and permanent teeth in children using various restorative materials like Glass Ionomer, Composites and Silver Amalgam. Stainless steel, Polycarbonate & Resin Crowns.

PEDIATRIC ENDODONTICS

Principles & Diagnosis.

Classification of Pulpal Pathology in primary, young permanent & permanent teeth

Management of Pulpally involved primary, young permanent & permanent teeth

- Pulp capping - direct & indirect
- Pulpotomy
- Pulpectomy
- Apexogenesis
- Apexification

Obturation Techniques & material used for primary, young permanent & permanent teeth in children

TRAUMATIC INJURIES IN CHILDREN

Classifications & Importance

Sequelae & reaction of teeth of trauma

Management of Traumatized teeth.

PREVENTIVE & INTERCEPTIVE ORTHODONTICS:

Definitions.

Problems encountered during primary and mixed dentition phases and their management

Serial extractions.

Space management

ORAL HABITS IN CHILDREN

Definition, Aetiology & Classification.

Clinical features of digit sucking, tongue thrusting, mouth breathing & various other secondary habits

Management of oral habits in children

DENTAL CARE OF CHILDREN WITH SPECIAL NEEDS :

-Definition, Aetiology, Classification, Behavioural and Clinical features & Management of children with :

- Physically handicapping conditions:
- Mentally Compromising conditions:
- Medically compromising conditions
- Genetic disorders

CONGENITAL ABNORMALITIES IN CHILDREN:

Definition, Classification, Clinical features & Management

DENTAL EMERGENCIES IN CHILDREN & THEIR MANAGEMENT

DENTAL MATERIAL USED IN PEDIATRIC DENTISTRY

PREVENTIVE DENTISTRY :

Definition

Principles & Scope

Types of prevention

Different preventive measures in Pediatric Dentistry including pit and fissure sealants and caries vaccine.

DENTAL HEALTH EDUCATION & SCHOOL DENTAL HEALTH PROGRAMMES.

FLUORIDES :

Historical background

Systemic & Topical fluorides

Mechanism of action.

Toxicity & Management

Defluoridation techniques.

CASE HISTORY RECORDING :

Outline of principles of examination, diagnosis & treatment planning.

SETTING UP OF PEDIATRIC DENTAL CLINIC

ETHICS

PRACTICALS:

Following is the recommended clinical quota for under graduate students in the subject of pediatric & preventive dentistry.

Restorations - Class I & II only : 45

Preventive measures e.g. Oral Prophylaxis - 20

Fluoride applications - 10

Extractions - 25

Case History Recording & Treatment Planning - 10

Education & motivation of the patients using disclosing agents. Educating patients about oral hygiene measures like tooth brushing, flossing etc.

BOOKS RECOMMENDED & REFERENCE:

1. Pediatric Dentistry (Infancy through Adolescence) - Pinkham.
2. Kennedy s Pediatric Operative Dentistry– Kennedy & Curzon.
3. Occlusal guidance in Pediatric Dentistry– Stephen H. Wei.
- Clinical use of Fluorides - Stephen H. Wei
- Pediatric Oral & Maxillofacial Surgery - Kaban
- Pediatric Medical Emergencies - P.S. Whatt
- Understanding of Dental Caries - Niki Foruk
- An Atlas of Glass Ionomer cements - G. J. Mount
- Clinical Pedodontics - Finn
- Textbook of Pediatric Dentistry - Braham Morris
- Primary Preventive Dentistry - Norman O. Harris

- Pediatric Dentistry - Damle S.G.
- Behaviour Management - Wright
- 18 Pediatric Dentistry _ Mathewson
- Traumatic Injuries - andreason
- Occlusal guidance in Pediatric Dentistry - Nakata
- Pediatric Drug Therapy - Tomare
- Contemporary Orthodontics - Profitt.

Preventive Dentistry - Depaola
Metabolism & Toxicity of Fluoride - whitford G.M.
Endodontic Practice - Grossman
Principles of Endodontics - Munford
Endodontics - Ingle
Pathways of Pulp - Cohen
Management of Traumatized anterior Teeth - Hargreaves.

PUBLIC HEALTH DENTISTRY

GOAL :

To prevent and control oral diseases and promote oral health through organized community efforts.

OBJECTIVES :

Knowledge :

At the conclusion of the course the student shall have a knowledge of the basis of public health, preventive dentistry, public health problems in India, Nutrition, Environment and their role in health, basics of dental statistics, epidemiological methods, National oral health policy with emphasis on oral health policy.

Skill & Attitude :

At the conclusion of the course the student shall have require at the skill of identifying health problems affecting the society, conducting health surveys, conducting health education classes and deciding health strategies. Students should develop a positive attitude towards the problems of the society and must take responsibilities in providing health.

Communication abilities :

At the conclusions of the course the student should be able to communicate the needs of the community efficiently, inform the society of all the recent methodologies in preventing oral disease.

Syllabus :

Introduction to Dentistry : Definition of Dentistry, History of dentistry, Scope, aims and objective dentistry.

Public Health :

Health & Disease : Concepts, Philosophy, Definition and Characteristics.

Public Health : Definition & Concepts, History of Public Health

General Epidemiology : Definition, objectives, methods

Environmental Health - Concepts, principles, protection, sources, purification environmental sanitation of water disposal of waste sanitation, then role in mass disorder.

Health Education : Definition, concepts, principles, methods, and health education aids.

Public health administration : Priority, establishment, manpower, private practice management, hospital management.

Ethics and Jurisprudence : Professional liabilities, negligence, malpractice, consents, evidence, contracts and methods of identification in forensic dentistry.

Nutrition in oral diseases

Behavioural science : Definition of sociology, anthropology and psychology and their in dental practice and community.

Health care delivery system : Centre and state, oral health policy, primary health care, national programmes health organizations.

Dental Public Health

Definition and difference between community and clinical health

Epidemiology of dental diseases dental caries, periodontal diseases, malocclusion, dental fluorosis and oral cancer.

Survey procedures : Planning, implementation and evaluation, WHO oral health survey methods 1997, indices for dental diseases.

Delivery of dental care : Dental auxiliaries, operational and non-operational, incremental and comprehensive health care, school dental health.

Payments of dental care : Methods of payments and dental insurance, government plans.

Preventive Dentistry - definition, Levels, role of individual, Community and profession, fluorides in dentistry, plaque control programmes.

Research Methodology and Dental Statistics

Health Information : Basic Knowledge of Computers, MS Office, Window 2000, Statistical Programmes

Research Methodology : Definition, types of research, designing a written protocol

Bio-Statistics : Introduction, collection of data, presentation of data, Measures of Central tendency, measures of dispersion, Tests of significance, Sampling and sampling techniques types, errors, bias, blind trails and calibration.

Practice Management

Place and locality

Premises & Layout

Selection of equipments

Maintenance of records / accounts /

audit Dentist Act 1948 with amendment

Dental Council of India and State Dental Councils

Composition and responsibilities

Indian Dental Association

Head Office, State, Local and branches.

PRACTICALS / CLINICALS / FIELD PROGRAMME IN COMMUNITY DENTISTRY

These exercises designed to help the student in IV year students:

Understand the community aspects of dentistry.

To take up leadership role in solving community oral health programme.

Exercises :

Collection of statistical data (demographic) on population in India, birth rates, morbidity and mortality, literacy, per capita income

Incidence and prevalence of common oral diseases like dental caries, periodontal disease, oral cancer, fluorosis at national and international levels.

Preparation of oral health education material posters, models, slides, lecturers, play acting skits etc.

Oral health status assessment of the community using indices and WHO basic oral health survey methods

Exploring and planning setting of private dental clinics in rural, semi urban and urban locations, availment of finance for dental practices-preparing project report.

Visit to primary health centre-to acquaint with activities and primary health care delivery

Visit to water purification plant / public health laboratory / centre for treatment of western and sewage water.

Visit to schools-to assess the oral health status of school children, emergency treatment and health education including possible preventive care at school (tooth brushing technique demonstration and oral rinse programme etc.)

Visit to institution for the care of handicapped, physically, mentally or medically compromised patients

Preventive dentistry : in the department application of pit and fissure sealants, fluoride gel application procedure, A.R.T., Comprehensive health for 5 pts at least 2 patients.

The colleges are encouraged to involve in the N.S.S. programme for college students for carrying out social work in rural areas.

SUGGESTED INTERNSHIP PROGRAMME IN COMMUNITY DENTISTRY

AT THE COLLEGE

Students are posted to the department to get training in dental practice management

Total oral health care approach - in order to prepare the new graduates in their approach to diagnosis, treatment planning, cost of treatment, prevention of treatment on schedule, recall maintenance of records etc. at least 10 patients (both children and adults of all types posting for at least one month).

The practice of chair side preventive dentistry including oral health education

AT THE COMMUNITY ORAL HEALTH CARE CENTRE (ADOPTED BY THE DENTAL COLLEGE IN RURAL AREAS)

Graduates posted for at least one month to familiarize in :

Survey methods, analysis and presentation of oral health assessment of school children and community independently using WHO basic oral health survey methods.

Participation in rural oral health education programmes

Stay in the village to understand the problems and life in rural areas.

III. DESIRABLE : Learning use of computers at least basic programme

Examination Pattern

Index : Case History

Oral hygiene indices simplified - Green and vermilion

Silness and Loe index for Plaque

Loe and Silness index for gingival

CPI

DMF : T & S, df:t and s

Deans fluoride index

Health Education

Make on - Audio visual aid

Make a health talk

Practical work

Pit and fissure sealant

Topical fluoride application

Introduction to statistical Methods by Garewal.

PERIODONTOLOGY

OBJECTIVES :

The student shall acquire the skill to perform dental scaling, diagnostic tests of periodontal diseases; to use the instruments for periodontal therapy and maintenance of the same.

The student shall develop attitude to impart the preventive measures namely, the prevention of periodontal diseases and prevention of the progress of the disease. The student shall also develop an attitude to perform the treatment with full aseptic precautions; shall develop an

attitude to prevent iatrogenic diseases; to conserve the tooth to the maximum possible time by maintaining periodontal health and to refer the patients who require specialist's care

Introduction : Definition of Periodontology, Periodontics, Periodontia, Brief historical background, Scope of Periodontics

Development of perio-dental tissues, micro structural anatomy and biology of periodontal tissues in detail Gingiva . Junctional epithelium in detail, Epithelial

Mesenchymal Interaction, Periodontal, ligament Cementum, Alveolar bone.

Defensive mechanisms in the oral cavity : Role of Epithelium, Gingival fluid, Saliva and other defensive mechanisms in the oral environment

4.	Age changes in periodontal structures and their significance in Geriatric dentistry	Age changes in teeth and periodontal structures and their association with periodontal diseases
5.	Classification of periodontal diseases	<p>Need for classification, scientific basis of 1 classification</p> <p>Classification of gingival and periodontal disease as described in world workshop 1989</p> <p>Gingivitis :</p> <p>Plaque associated, ANUG, steroid hormone influenced Medication influenced, Desquamative gingivitis, other forms of gingivitis as in nutritional deficiency, bacterial and viral infections etc.</p> <p>Periodontitis :</p> <p>Adult periodontitis, Rapidly progressive periodontitis A & B, Juvenile periodontitis (localized, generalized, and post juvenile), Prepubertal periodontitis Refractory periodontitis</p>
6	Gingival diseases	<p>Localized and generalized gingivitis, papillary, marginal and diffuse gingivitis</p> <p>Etiology, Pathogenesis, clinical signs, symptoms and management of</p> <p>i) Plaque associated gingivitis</p> <p>ii) Systemically aggravated gingivitis (sex hormones, drugs and systemic diseases)</p> <p>iii) ANUG</p> <p>iv) Desquamative gingivitis-Gingivitis associated with lichen planus, pemphigoid, pemphigus and other vesiculobullous lesions</p> <p>v) Allergic gingivitis</p> <p>vi) Infective gingivitis-Herpetic, bacterial and candidial</p> <p>vii) Pericoronitis</p> <p>viii) Gingival enlargement (classification and differential diagnosis)</p>
7	Epidemiology of periodontal diseases	<ul style="list-style-type: none"> - Definition of index, incidence, prevalence, epidemiology, endemic, epidemic and pandemic - classification of indices (Irreversible and reversible) - Deficiencies of earlier indices used in Periodontics

		<ul style="list-style-type: none"> - Detailed understanding of Silness & Loe Plaque Index, Loe & Silness Gingival Index, CPITN & CPI - Prevalence of periodontal diseases in India and other countries - Public health significance (all these topics are covered at length under community dentistry. Hence, the topics may be discussed briefly. However, questions may be asked from the topics for examination.
8	Extension of inflammation from gingiva	Mechanism of spread of inflammation from gingival area to deeper periodontal structures factors that modify the spread
9.	Pocket	Definition, signs and symptoms, classification, pathogenesis, histopathology, root surface changes and contents of the pocket.
10.	Etiology	<ul style="list-style-type: none"> - Dental plaque (Biofilm) - Definition, New concept of biofilm - Types composition, bacterial colonization, growth, maturation and disclosing agents - Role of dental plaque in periodontal diseases - Plaque microorganism in detail and bacteria associated with periodontal diseases - Plaque retentive factors - Materia alba - Food debris - Calculus - Definition - Types, composition, attachment, theories of formation - Role of calculus in disease <p>Food impaction</p> <ul style="list-style-type: none"> - Definition - Types, Etiology - Hirschfelds classification - Signs, symptoms & sequelae of treatment <p>Trauma from Occlusion</p> <ul style="list-style-type: none"> - Definition, Types - Histopathological changes - Role in periodontal disease - Measures of management in brief <p>Habits</p> <ul style="list-style-type: none"> - Their periodontal significance - Bruxism & parafunctional habits, tongue thrusting, lip biting, occupational habits. <p>IATROGENIC FACTORS</p> <p>Conservative Dentistry</p> <ul style="list-style-type: none"> - Restorations - Contact point, marginal ridge, surface roughness, overhanging restorations, interface between restoration and teeth <p>Prosthodontics</p> <ul style="list-style-type: none"> - Interrelationship - Bridges and other prosthesis pontics (types) surface contour, relationships of margins to

		<p>the perodontium, Gingival protection theory, muscle action theory and theory of access to oral hygiene.</p> <p>Orthodontics</p> <ul style="list-style-type: none"> - Interrelationship, removable appliances & fixed appliances - Retention of plaque, bacterial changes <p>Systemic diseases</p> <ul style="list-style-type: none"> - Diabetes, sex hormones, nutrition (Vit.C & proteins) - AIDS & periodontium - Hemorrhagic disease, Leukemia, clotting factor disorders, PMN disorders
11.	Risk factors	<ul style="list-style-type: none"> - Definition, Risk factors for periodontal diseases 1
12.	Host response	<ul style="list-style-type: none"> - Mechanism of initiation and progression of 3 periodontal diseases - Basic concepts about cells, Mast cells, neutrophils, macrophages, lymphocytes, immunoglobulin, complement system, immune mechanisms & cytokines in brief - Stages in gingivitis - initial, early, established and advanced - Periodontal disease activity, continuous paradigm, random burst & asynchronous multiple burst hypothesis
13.	Periodontitis	<ul style="list-style-type: none"> - Etiology, histopathology, clinical signs & 6 symptoms, diagnosis and treatment of adult periodontitis - Periodontal abscess; definition, classification, pathogenesis, differential diagnosis and treatment - Furcation involvement, Glickman's classification, prognosis and management - Rapidly progressive periodontitis - Juvenile periodontitis : Localised and generalized - Post juvenile periodontitis - Periodontitis associated with systemic diseases - Refractory periodontitis
14.	Diagnosis	<ul style="list-style-type: none"> - Routine procedures, methods of probing, types of probes (According case history) - Halitosis: Etiology and treatment. Mention advanced diagnostic aids and their role in brief.
15.	Prognosis	<ul style="list-style-type: none"> - Definition, types, purpose and factors to be taken into consideration
16.	Treatment plan	<ul style="list-style-type: none"> - Factors to be considered
17.	Periodontal Therapy	<p>A. General principles of periodontal therapy. Phase I, II, III, IV therapy</p> <p>Definition of periodontal regeneration, repair, new attachment and reattachment</p> <p>B. Plaque control</p> <p>i. Mechanical tooth brushes, interdental cleaning aids, dentifrices</p>

		ii. Chemical ; classification and mechanism of action of each & Pocket irrigation
18.	Pocket eradication procedures	<ul style="list-style-type: none"> - Scaling & root planning - indications - Aims & objectives - Healing following root planning - Hand instruments, sonic, ultrasonic & peizo electric scalers - curettage & present concepts - definition - indications - Aims & objectives - procedures & healing response - Flap surgery - Definition - Types of flaps, Design of flaps, papilla preservation - Indications & contraindications - Armamentarium - Surgical procedure & healing response
19.	Osseous Surgery	<p>Osseous defects in periodontal disease</p> <ul style="list-style-type: none"> - Definition - Classification - Surgery : resective, additive osseous surgery (osseous grafts with classification of grafts) - Healing responses - Other regenerative procedures ; root conditioning - Guided tissue regeneration
20.	Mucogingival surgery & periodontal plastic surgeries	<p>Definition</p> <p>Muscogingival problems : etiology, classification of gingival recession (P.D. Miller Jr. and Sullivan and atkins)</p> <p>Indications & objectives</p> <p>Gingival extension procedures : lateral predicle graft, frenectomy, frenotomy</p> <p>Crown lengthening procedures</p> <p>Periodontal microsurgery in brief</p>
21.	Splints	<ul style="list-style-type: none"> - Periodontal splints - Purpose & Classification - Principles & splinting
22.	Hypersensitivity	Causes, Theories & Management
23.	Implants	<p>Definition, types, scope & biomaterials uses</p> <p>Periodontal consideration : Such as implant-bone interface, implant - gingival interface, implant failure, peri implantitis & management</p>
24.	Maintenance phase (SPT)	<ul style="list-style-type: none"> - Aims, objective and principles - Importance - Procedures - Maintenance of implants
25.	Pharmaco - therapy	<ul style="list-style-type: none"> - Periodontal dressings - antibiotics & anti-inflammatory drugs - Local drug delivery systems
26.	Periodontal management of medically	Topics concerning periodontal management of

	Compromised patients	medically compromised patients
27.	Inter-disciplinary care	<ul style="list-style-type: none"> - Pulpo-periodontal involvement - Routes of spread of infection - Simons classification - Management
28.	Systemic effects of periodontal diseases in brief	- Cardiovascular diseases Low birth weight babies etc.
29.	Infection control protocol	Sterilization and various aseptic procedures
30.	Ethics	

TUTORIALS DURING CLINICAL POSTING ;

Infection control

Periodontal instruments

Chair position and principles of instrumentation

Maintenance of instruments (sharpening)

Ultrasonic, Peizoelectric and sonic scaling - demonstration of technique

Diagnosis of periodontal disease and determination of prognosis

Radiographic interpretation and lab investigations

Motivation of patients - oral hygiene instructions

Students should be able to record a detailed periodontal case history, determine diagnosis, prognosis and plan treatment. Student should perform scaling, root planning local drug delivery and SPT. Shall be given demonstration of all periodontal surgical procedures.

DEMONSTRATIONS :

History taking and clinical examination of the patients

Recording different indices

Methods of using various scaling and surgical instruments

Polishing the teeth

Bacterial smear taking

Demonstration to patients about different oral hygiene aids

Surgical procedures - gingivectomy, gingivoplasty and flap operations

Follow up procedures, post operative care and supervision

REQUIREMENTS:

Diagnosis, treatment planning and discussion and total periodontal treatment - 25 cases

Dental scaling, oral hygiene instructions - 50 complete cases / equivalent

Assistance in periodontal surgery - 5 cases

A work record should be maintained by all the students and should be submitted at the time of examination after due certification from the head of the department.

Students should have to complete the work prescribed by the concerned department from time to time and submit a certified record for evaluation.

PRESCRIBED BOOK :

Glickman's Clinical Periodontology - Carranza

REFERENCE BOOKS

Essentials of Periodontology and periodontics - Torquil MacPhee

Contemporary periodontics - Cohen

Periodontal therapy - Goldman

Orban's periodontics - Orban

Oral Health Survey - W.H.O.

Preventive Periodontics - Young and Stiffler

Public Health Dentistry - Slack

Advanced Periodontal Disease - John Prichard

Preventive Dentistry - Forrest

Clinical Periodontology - Jan Lindhe

Periodontics - Baer & Morris.

18. PROSTHODONTICS AND CROWN & BRIDGE

Complete Dentures

Applied Anatomy and Physiology

Introduction

Biomechanics of the edentulous state

Residual ridge resorption

Communicating with patient

Understanding the patients.

➤ Mental Attitude

Instructing the patient

C.Diagnosis and treatment planning for patients

With some teeth remaining

With no teeth remaining

Systemic status

Local factor

The geriatric patients

d) Diagnostic procedures

Articulators - discussion

Improving the patients denture foundation and ridge relation - an overview.

Pre-operative examination

Initial hard tissue & soft tissue procedures

Secondary hard and soft tissue procedure

Implant procedure

Congenital deformities

Postoperative procedure.

Principles of Retention, Support and Stability

Impressions - detail

Muscles of facial expression

Biological considerations for maxillary and mandibular impression including anatomy landmark and their interpretation.

Impression objectives

Impression materials

Impression techniques

Maxillary and mandibular impression procedures.

Preliminary impressions

final Impressions

Laboratory procedures involved with impression making (Beading & Boxing, and cast preparation)

Record bases and occlusion rims - in detail

Materials & techniques

useful guidelines and ideal parameters

recording and transferring bases and occlusal rims

Biological consideration in jaw relation & jaw movements - craniomandibular relations.

Mandibular movements

Maxillo - mandibular relation including vertical and horizontal jaw relations.

Concept of occlusion - discuss in brief

Relating the patient to the articulator

Face bow types and uses - discuss in brief

Face bow transfer procedure - discuss in brief

Recording maxillo mandibular relation

Vertical relations

Centric relation records

Eccentric relation records.

Lateral relation records

Tooth selection and arrangement

Anterior teeth

Posterior teeth

Esthetic and functional harmony

Relating inclination of teeth to concept of occlusion - in brief

Neurocentric concept

Balanced occlusal concept

Trial dentures

Laboratory procedures

Wax contouring

Investing of dentures

Preparing of mold

Preparing & Packing acrylic resin

Processing of dentures

Recovery of dentures

Lab remount procedures

Recovering the complete denture from the cast

Finishing and polishing the complete denture

Plaster cast for clinical denture remount procedure

Denture insertion

Insertion procedures

Clinical errors

Correcting occlusal disharmony

Selective grinding procedures.

Treating problems with associated denture use - discuss in brief (tabulation / flow chart form)

Treating abused tissues - discuss in brief

Relining and rebasing of dentures - discuss in brief

Immediate complete dentures construction procedure - discuss in brief

The single complete denture - discuss in brief

Overdentures denture - discuss in brief

Dental implants in complete denture - discuss in brief.

Note : It is suggested that the above mentioned topics be dealt with wherever appropriate in the following order so as to cover -

Definition

Diagnosis (of the particular situation / patient selection / treatment planning)

Types / classification

Materials

Methodology - Lab / Clinical

Advantages & disadvantages

Indication, contraindications

Maintenance phase

Oral Implantology

Ethics

Removable Flexible Dentures

Introduction

- Terminologies and scope

Classification

Examination, Diagnosis & Treatment planning and evaluation of diagnostic data

Components of a removable partial

- Major connectors,
- Minor connectors
- Rest and rest seats

Components of a Removable Partial Denture

- Direct retainers
- Indirect retainers
- Tooth replacement

Principles of Removable Partial Denture Design

Survey and design - in brief

- Surveyors
- Surveying
- Designing

Mouth preparation and masters cast

Impression materials and procedures for removable partial dentures

Preliminary jaw relation and esthetic try in for some anterior replacement teeth

Laboratory procedures for framework construction - in brief.

Fitting the framework - in brief.

Try - in of the partial denture - in brief

Completion of the partial denture - in brief

Inserting the Removable Partial Denture - in brief

Postinsertion observations.

Temporary Acrylic Partial Dentures.

Immediate Removable Partial Denture.

Removable Partial Dentures opposing Complete denture.

Note: It is suggested that the above mentioned topics be dealt with wherever appropriate in the following order so as to cover -

Definition

Diagnosis (of the particular situation / patient selection / treatment planning)

Types / Classification

Materials

Methodology - Lab / Clinical

Advantages & disadvantages

Indications, contradictions

Maintenance Phase

Fixed Partial Dentures

Topics To Be Covered In Detail

Introduction

Fundamentals of occlusion - in brief.

Articulators - in brief

Treatment planning for single tooth restorations.

Treatment planning for the replacement of missing teeth including selection and choice of abutment teeth.

Fixed partial denture configurations.

Principles of tooth preparations.

Preparations for full veneer crowns - in detail.

Preparations for partial veneer crowns - in brief

Provisional Restorations

Fluid Control and Soft Tissue Management

Impressions

Working Casts and Dies

Wax patterns
Pontics and Edentulous Ridges
Esthetic Considerations
Finishing and Cementation

Topics To Be Covered In Brief -

Solder Joints and Other Connectors
All - Ceramic Restorations
Metal - Ceramic Restorations
Preparations of intracoronar restorations.
Preparations for extensively damaged teeth.
Preparations for periodontally weakened teeth
The Functionally Generated Path Technique
Investing and Casting
Resin - Bonded Fixed Partial Denture

Note : It is suggested that the above mentioned topics be dealt with wherever appropriate in the following order so as to cover -

Definition
Diagnosis (of the particular situation / patient selection / treatment planning)
Types / Classification
Materials
Methodology - Lab / Clinical
Advantages & disadvantages
Indications, contradictions
Maintenance Phase

RECOMMENDED BOOKS :

Syllabus of Complete denture by - Charles M. Heartwell Jr. and Arthur O. Rahn.
Bouchers „Prosthetic treatment for edentulous patients.“
Essentials of complete denture prosthodontics by - Sheldon Winkler.
Maxillofacial prosthetics by - William R. Laney.
McCrakens Removable partial Prosthodontics
Removable partial prosthodontics by - Ernest L. Miller and Joseph E. Grasso.

AESTHETIC DENTISTRY

Aesthetic Dentistry is gaining more popularity since last decade. It is better that undergraduate students should understand the philosophy and scientific knowledge of the esthetic dentistry.

Introduction and scope of esthetic dentistry

Anatomy & physiology of smile

Role of the colour in esthetic dentistry

Simple procedures (rounding of central incisors to enhance esthetics appearance)

Bleaching of teeth

Veneers with various materials

Preventive and interceptive esthetics

Ceramics

Simple gingival contouring to enhance the appearance

Simple clinical procedures for BDS students

Recommended books:

Esthetic guidelines for restorative dentistry; Scharer & others

Esthetics of anterior fixed prosthodontics; Chiche (GJ) & Pinault (Alain)

Esthetic & the treatment of facial form, Vol 28; Mc Namara (JA)

FORENSIC ODONTOLOGY (30 HRS OF INSTRUCTION)

Definition

Forensic is derived from the Latin word forum, which means court of law. Odontology literally implies the study of teeth. Forensic odontology, therefore, has been defined by the Federation Dentaire International (FDI) as „that branch of dentistry which, in the interest of justice, deals with the proper handling and examination of dental evidence, and with the proper evaluation and presentation of dental findings.“

Objectives of the undergraduate curriculum

At the end of the programme, the dental graduate should:

Have sound knowledge of the theoretical and practical aspects of forensic odontology.

Have an awareness of ethical obligations and legal responsibilities in routine practice and forensic casework.

Be competent to recognize forensic cases with dental applications when consulted by the police, forensic pathologists, lawyers and associated professionals.

Be competent in proper collection of dental evidence related to cases of identification, ethnic and sex differentiation, age estimation and bite marks.

Be able to assist in analysis, evaluation, and presentation of dental facts within the realm of law.

Curriculum for forensic odontology

Introduction to forensic dentistry

- Definition and history
- Recent developments and future trends

Overview of forensic medicine and toxicology

- Cause of death and postmortem changes
- Toxicological manifestations in teeth and oral tissues

Dental identification

- Definition
- Basis for dental identification
- Postmortem procedures
- Dental record compilation and interpretation
- Comparison of data, and principles of report writing
- Identification in disasters and handling incinerated remains
- Postmortem changes to oral structures

Maintaining dental records

- Basic aspects of good record - keeping
- Different types of dental records
 - Dental charts
 - Dental radiographs
 - Study casts
 - Denture marking
 - Photographs
- Dental notations
- Relevance of dental records in forensic investigation

Age estimation

- Age estimation in children and adolescents
 - Advantages of tooth calcification over eruption in estimating age
 - Radiographic methods of Schour & Massler, Demirjian et al
- Age estimation in adults

○

Histological methods - Gustafson's six variables and Johanson's modification,

Bang & Ramms dentine translucency

- Radiographic method of Kvaal et al
- Principles of report writing

Sex differentiation

- Sexual dimorphism in tooth dimensions (Odontometrics)

Ethnic variations (racial differences) in tooth morphology

- Description of human population groups
- Genetic and environmental influences on tooth morphology
- Description of metric and non-metric dental features used in ethnic differentiation

Bite mark procedures

- Definition and classification
- Basis for bite mark investigation
- Bite mark appearance
- Macroscopic and microscopic ageing of bite marks
- Evidence collection from the victim and suspect of bite mark
- Analysis and comparison
- Principles of report writing
- Animal bite investigation

Dental DNA methods

- Importance of dental DNA evidence in forensic investigations
- Types of DNA and dental DNA isolation procedures
- DNA analysis in personal identification
- Gene-linked sex dimorphism
- Population genetics

Jurisprudence and ethics

- Fundamentals of law and the constitution
- Medical legislation and statutes (Dental and /medical Council Acts, etc)
- Basics of civil law (including torts, contracts and consumer protection act)
- Criminal and civil procedure code (including expert witness requirement)
- Assessment and quantification of dental injuries in courts of law
- Medical negligence and liability
- Informed consent and confidentiality
- Rights and duties of doctors and patients
- Medical and dental ethics (as per Dentists Act)

Theory session and practical exercises

Total hours for the course

- Didactic - 10-12 hours
- Practical - 20-25 hours

Detailed didactic sessions for the above components, either in the form of lectures or as structured student - teacher interactions, is essential. Specialists from multiple disciplines, particularly from legal and forensic sciences, can be encouraged to undertake teaching in their area of expertise.

An interactive, navigable and non-linear (INN) model may also be utilized for education. Practical exercises (real-life casework and / or simulated cases) must complement didactic sessions to facilitate optimal student understanding of the subject. Mandatory practical training in dental identification methods, dental profiling (ethnic and sex differences, radiographic age estimation), and bite mark procedures, is of paramount importance. In addition, practical exercises / demonstrations in histological age estimation, comparative dental anatomy, DNA methods, medical autopsy, court visits, and other topics may be conducted depending on available expertise, equipment and feasibility.

Approach to teaching forensic odontology

Forensic odontology could be covered in two separate streams. The divisions include a preclinical stream and a clinical stream.

Preclinical stream

- introduction to forensic odontology
- Sex differences in odontometrics
- Ethnic variations in tooth morphology
- Histological age estimation
- Dental DNA methods
- Bite marks procedures
- Overview of forensic medicine and toxicology

It could prove useful to undertake the preclinical stream in II or III year under Oral Biology / Oral Pathology since these aspects of forensic odontology require grounding in dental morphology, dental histology and basic sciences, which, students would have obtained in I and / or II BDS.

Clinical stream

- Dental identification
- Maintaining dental records
- Radiographic age estimation

- Medical jurisprudence and ethics

It would be suitable to undertake these topics in the IV or V year as part of Oral Medicine and Radiology, since students require reasonable clinical exposure and acumen to interpret dental records, perform dental postmortems and analyse dental radiographs for age estimation.

ORAL IMPLANTOLOGY (30 hrs of instruction)

INTRODUCTION TO ORAL IMPLANTOLOGY

Oral Implantology is now emerged as a new branch in dentistry world wide and it has been given a separate status in the universities abroad. In India day to day the practice of treating patients with implants are on rise. In this contest inclusion of this branch into under graduate curriculum has become very essential. The objective behind this is to impart basic knowledge of Oral Implantology to undergraduates and enable them to diagnose, plan the treatment and to carry out the needed pre surgical mouth preparations and treat or refer them to speciality centres. This teaching programme may be divided and carried out by the Dept. of Oral Surgery, Prosthodontics and Periodontics.

History of implants, their design & surface characteristics and osseo-integration

Scope of oral & maxillofacial implantology & terminologies

A brief introduction to various implant systems in practice

Bone biology, Morphology, Classification of bone and its relevance to implant treatment and bone augmentation materials.

Soft tissue considerations in implant dentistry

Diagnosis & treatment planning in implant dentistry

Case history taking / Examination / Medical evaluation / Orofacial evaluation / Radiographic evaluation / Diagnostic evaluation / Diagnosis and treatment planning / treatment alternatives / Estimation of treatment costs / patient education and motivation

Pre surgical preparation of patient

Implant installation & armamentarium for the Branemark system as a role model

First stage surgery - Mandible - Maxilla

Healing period & second stage surgery

Management of surgical complications & failures

General considerations in prosthodontic reconstruction & Bio mechanics

Prosthodontic components of the Branemark system as a role model

Impression procedures & Preparation of master cast

Jaw relation records and construction of suprastructure with special emphasis on occlusion for osseointegrated prosthesis

Management of prosthodontic complications & failures

17. Recall & maintenance phase.

Criteria for success of osseointegrated implant supported prosthesis

SUGGESTED BOOKS FOR READING

1. Contemporary Implant Dentistry - Carl .E. Misch
Mosby 1993 First Edition.
2. Osseointegration and Occlusal Rehabilitation Hobo S., Ichida. E. and Garcia L. T.
Ouintessence Publishing Company,
1989 First Edition.

BEHAVIOURAL SCIENCES (20 hrs of instruction)

GOAL:

The aim of teaching behavioural sciences to undergraduate student is to impart such knowledge & skills that may enable him to apply principles of behaviour -

For all round development of his personality

In various Therapeutic situations in dentistry.

The student should be able to develop skills of assessing psychological factors in each patient, explaining stress, learning simple counseling techniques, and improving patients compliance behaviour.

OBJECTIVES:

KNOWLEDGE & UNDERSTANDING:

At the end of the course, the student shall be able to:

Comprehend different aspects of normal behaviour like learning, memory, motivation, personality & intelligence.

Recognise difference between normal and abnormal behaviour.

Classify psychiatric disorders in dentistry.

Recognise clinical manifestations of dental phobia, dental anxiety, facial pain orofacial manifestations of psychiatric disorders, and behavioural problems in children. Addictive disorders, psychological disorders in various dental departments.

Should have understanding of stress in dentistry and knowledge of simple counseling techniques.

Have some background knowledge of interpersonal, managerial and problem solving skills which are an integral part of modern dental practice.

Have knowledge of social context of dental care.

SKILLS

The student shall be able to:

Interview the patient and understand different methods of communication skills in dentist - patient relationship.

Improve patients compliance behaviour.

Develop better interpersonal, managerial and problem solving skills.

Diagnose and manage minor psychological problems while treating dental patients.

INTEGRATION:

The training in Behavioural sciences shall prepare the students to deliver preventive, promotive, curative and rehabilitative services to the care of the patients both in family and community and refer advanced cases to specialized psychiatric hospitals.

Training should be integrated with all the departments of Dentistry, Medicine, Pharmacology, Physiology and Biochemistry.

PSYCHOLOGY:

1) Definition & Need of Behavioural Science. Determinants of Behaviour. Hrs 1

Scope of Behavioural Science.

Sensory process & perception perceptual process - clinical applications.

Attention - Definition - factors that determine attention. Clinical application.

Memory - Memory process - Types of memory, Forgetting:

Methods to improve memory, Clinical assessment of memory & clinical applications.

Definition - Laws of learning

Type of learning. Classical conditioning, operant conditioning, cognitive learning, Insight learning, social learning, observational learning, principles of learning - Clinical application.

Intelligence - Definition: Nature of intelligence stability of intelligence

Determinants of intelligence, clinical application

Thinking - Definition: Types of thinking, delusions, problem solving 8)

Motivation - Definition: Motive, drive, needs classification of motives

Emotions - Definition differentiation from feelings - Role of hypothalamus, Cerebral cortex, adrenal glands ANS. Theories of emotion, Types of emotions.

Personality. Assessment of personality: Questionnaires, personality inventory, rating scales, Interview projective techniques - Rorschach ink blot test, RAT, CAT

SOCIOLOGY:

Social class, social groups - family, types of family, types of marriages, communities and Nations and institutions.

REFERENCE BOOKS:

General psychology - S. K. Mangal

General psychology - Hans Raj, Bhatia

General psychology - Munn

Behavioural Sciences in Medical practice - Manju Mehta

Sciences basic to psychiatry - Basanth Puri & Peter J Tyrer

ETHICS (20 hrs. of instruction)

Introduction:

There is a definite shift now from the traditional patient and doctor relationship and delivery of dental care. With the advances in science and technology and the increasing needs of the patient, their families and community, there is a concern for the health of the community as a whole. There is a shift to greater accountability to the society. Dental specialists like the other health professionals are confronted with many ethical problems. It is therefore absolutely necessary for each and every one in the healthcare delivery to prepare themselves to deal with these problems. To accomplish this and develop human values Council desires that all the trainees undergo ethical sensitization by lectures or discussion on ethical issues, discussion of cases with an important ethical component.

Course content:

Introduction to ethics -

what is ethics?

What are values and norms?

How to form a value system in ones personal and professional life?

Hippocratic oath.

Declaration of Helsinki, WHO declaration of Geneva, International code of ethics,

DCI code of ethics.

Ethics of the individual -

The patient as a person

Right to be respected

Truth and confidentiality

Autonomy of decision

Doctor Patient relationship

Profession Ethics -

Code of conduct

Contract and confidentiality

Charging of fees, fee splitting

Prescription of drugs

Over - investigating the patient

Malpractice and

negligence Research Ethics -

Animal and experimental research / humanness

Human experimentation

Human volunteer research - informed consent

Drug trials

Ethical workshop of cases

Gathering all scientific

factors Gathering all value

Identifying areas of value - conflict, setting of

priorities Working our criteria towards decisions
