PERIODONTOLOGY

INFLUENCE OF SYSTEMIC DISEASES ON PERIODONTIUM

DIABETES MELLITUS: Enlarged plaque, acute or generalized gingivitis, frequent abscess formation, furcation, vital, tunnel, tooth, deep periodontal pockets, greater loss of attachment.

Causes: Increased Pathogens: ↑ Glucose in gingival fluid and blood → change in environment of the microflora, qualitative changes in bacteria.

Pathophysiology: ↑ Leukocyte: ↑ Leukocyte Pathogenesis → Impaired chemotaxis, ↓ activity phagocytosis or impaired adhesion.

Altered Collagen Metabolism: ↓ Collagen activity & ↑ collagen synthesis, adversely affects synthesis, degradation, maintenance of collagen & extracellular matrix → accumulated glycation end products (AGEs). It will make collagen less soluble.

Immunologic response: ↓ in immunologic response.

Impaired host plaque: → accelerates periodontal response. Most severe in 8th month & in 9th month. Marginal and interdental → height to attack rate, ↑ severity the attachment ↓ tendency to bleed.

Periodontal treatment: Also known as systemic treatment. It is highly variable, since the more severe systemic case the anterior part of the mouth. It also shows increase in P. Intermedia.

SCURVY: ↑ in the number of erythrocytes and amount of haemoglobin. It shows puffiness of the gingiva and of alveolar, gum about compression of the jaw.

- Red, swollen & shiny areas → atrophy of the papilla.
- Delayed healing of the gingival wound after surgical intervention.

DIETARY DEFICIENCY:

Vitamin C:

- Low level affects metabolism of collagen with perturbation, affecting those responsible for repair itself.
- Low level with bone formation → loss of periodontal bone.
- They not maintain the epithelium's barrier to bacterial products.
- The vit C enhances the chemotactic & phagocytic activity of leucocytes without influencing their phagocytic activity.
- Normal level → controls the length of periodontal and alveolar vascular response to bacterial plaque & wound healing.
- Depletion of vit C → ↑ the pathogenicity of the bacteria in the plaque.

Vitamin B12: Gingivitis, gingivitis, glossitis, angular stomatitis & inflammation of the colic oral mucosa.

- Thrombocytopenia → hypercoagulability, causes rupture in buccal mucosa, tongue, palate & uvula of oral mucosa.
- Stomatitis, gingivitis, periodontitis, stomatitis, stomatitis, stomatitis, stomatitis.
- Alveolar pathogenesis → gingivitis, gingivitis & generalized stomatitis, stomatitis, stomatitis.
- Wide oral, mucosa of the gingiva, PMN & alveolar bone without inflammation.

PMN (in 1st line of defence) → critical role in bacterial infection. Chronic disorders → ↓ in number & function of neutrophils → periodontal destruction.

(1) Neutropenia, (2) Agammaglobulinemia, (3) Chronic Granulomatous Disease, (4) Low Leukocyte Adhesion, (5) Leukocyte Adhesion Deficiency, (6) Proliferative defects.
