**Dr. Harshada Jagtap: 9119511262**

### TYPES OF CAMERA

		
<b>Point &amp; Shoot camera</b> Point and shoot camera: A compact camera with a fixed lens. Generally considered by professional photographers as they are easy to use and have a wide range of lenses. They are also known for their portability and ease of use.	<b>DSLR (Digital Single Lens Reflex)</b> DSLRs are what professional photographers commonly use as they allow maximum flexibility and customization for the highest possible quality of digital images.	<b>Mirrorless camera</b> As the name suggests, mirrorless cameras capture images without the use of a mirror. This is different from DSLR cameras which reflect light into viewfinders via mirrors. Instead, mirrorless cameras often use electronic viewfinders (EVF) to display images digitally.
